"Weaving together stories from sources as wide-ranging as classical literature, social and cognitive psychology, philosophy, art, and video games, *Propelled: How Boredom, Frustration, and Anticipation Lead Us to the Good Life* makes a lively case for the value of discontent in our lives. It offers novel, detailed, and scientifically informed characterizations of the nature and outcomes of boredom, frustration, and anticipation. The book demonstrates why these three states should not be viewed as obstacles to our goals but as elements of the good life and explicates how they can illuminate our desires and expectations, inform us when we find ourselves stuck in unpleasant and unfulfilling situations, and motivate us to furnish our lives with meaning, interest, and value"--

This book argues that the 'constructivist metaphor' has become a self-appointed overriding concept that suppresses other modes of thinking about knowing and learning science. Yet there are questions about knowledge that constructivism cannot properly answer, such as how a cognitive structure can intentionally develop a formation that is more complex than itself; how a learner can aim at a learning objective that is, by definition, itself unknown; how we learn through pain, suffering, love or passion;

and the role emotion and crises play in knowing and learning. In support of the hypothesis that passibility underlies cognition, readers are provided with a collation of empirical studies and phenomenological analyses of knowing and learning science—in schools, scientific laboratories and everyday life—all of which defy a constructivist explanation. The author argues that 'passibility' constitutes an essential factor in the development of consciousness, with a range of essential experiences that cannot be brought into the linguistic realm. His exploration is guided by concepts such as 'otherness', passion, passivity and undecidability, and concludes by resituating the construction metaphor to accord it its proper place in a more comprehensive theory of learning.

This New York Times bestselling book is filled with hundreds of fun, deceptively simple, budget-friendly ideas for sprucing up your home. With two home renovations under their (tool) belts and millions of hits per month on their blog YoungHouseLove.com, Sherry and John Petersik are home-improvement enthusiasts primed to pass on a slew of projects, tricks, and techniques to do-it-yourselfers of all levels. Packed with 243 tips and ideas—both classic and unexpected—and more than 400 photographs and illustrations, this is a book that readers will return to again and again for the creative projects and easy-to-follow instructions in the relatable voice the Petersiks are known for. Learn to trick out a thrift-store mirror, spice up plain old roller shades, "hack" your Ikea table to create three distinct looks, and so much more.

It's a scary moment when your doctor diagnoses you with kidney disease. You feel like your whole world has shifted. Your days are going to be full of doctor appointments and health checks. The constant worry of maybe needing dialysis will always weigh on your mind. What if there was an easy and natural way to combat kidney disease and avoid dialysis? There is! With the Renal Diet Cookbook for Beginners, you can start fighting back - starting in the kitchen. This cookbook is jam-packed with foods and recipes that won't compromise your kidneys and keep you healthy. With this cookbook in your hands, you will: Have 250 recipes that won't compromise your kidneys and keep you in a healthy state Avoid dialysis treatments just by cooking and eating the recipes in this book Discover the science and methods behind the renal diet and why it's so effective Learn about chronic kidney disease and how you can cope with it to live a normal life Find your new favorite recipes for breakfast, lunch, dinner, and snacks throughout the day Keep your health in high standing and feel the best you have in a while And Much More! Don't let your kidney disease kick you down. Take charge of your life and show this disease who's boss! Just by following the Renal Diet Cookbook, you can avoid dialysis treatments and get control of your life again.

By following the instructions in this book, you will become the manufacturer of an idea. This book is an instruction manual for a product that only exists if you build it. Here are the instructions. I have designed this device so that you can produce your food, using some inexpensive Ikea boxes and the directions in this book. This system uses hydroponics, a farming technique that can be used to grow plants in water instead of soil. The reason for using hydroponics is very simple: hydroponics allows you to save up to the 90% of the water used in traditional agriculture systems, requires much less space, and provides you with full control of the nutrients needed by the plants at each stage of their growth. Another great thing about hydroponics is that you don't have to worry about watering the plants. The system I have designed combines different hydroponics techniques. These are adapted to make them easy to use at home. This means that you become a farmer, perhaps an urban farmer. However, this book is not a book on urban farming, nor is it a general book about hydroponics. This book is a manual that will show you how to build and run a simple hydroponic system with some inexpensive Ikea boxes. I call this system ELI000.

Poignant, touching, and lively, this memoir of a woman who loses her mother and creates a new life for herself in Paris will speak to anyone who has lost a parent or reinvented themselves. Lisa Anselmo wrapped her entire life around her mother, a strong woman who was a defining force in her daughter's life—maybe too defining. When her mother dies from breast cancer, Lisa realizes she hadn't built a life of her own, and struggles to find her purpose. Who is she without her mother—and her mother's expectations? Desperate for answers, she reaches for a lifeline in the form of an apartment in Paris, refusing to play it safe for the first time. What starts out as a lurching act of survival sets Lisa on a course that reshapes her life in ways she never could have imagined. But how can you imagine a life bigger than anything you've ever known? In the vein of *Eat, Pray, Love* and *Wild, My (Part-time) Paris* Life a story is for anyone who's ever felt lost or hopeless, but still holds out hope of something more. This candid memoir explores one woman's search for peace and meaning, and how the ups and downs of expat life in Paris taught her to let go of fear, find self-worth, and create real, lasting happiness.

A leading innovation scholar explains the growing phenomenon and impact of free innovation, in which innovations developed by consumers and given away “for free.” In this book, Eric von Hippel, author of the influential *Democratizing Innovation*, integrates new theory and research findings into the framework of a “free innovation paradigm.” Free innovation, as he defines it, involves innovations developed by consumers who are self-rewarded for their efforts, and who give their designs away “for free.” It is an inherently simple grassroots innovation process, unencumbered by compensated transactions and intellectual property rights. Free innovation is already widespread in national economies and is steadily increasing in both scale and scope. Today, tens of millions of consumers are collectively spending tens of billions of dollars annually on innovation development. However, because free innovations are developed during consumers' unpaid, discretionary time and are given away rather than sold, their collective impact and value have until very recently been hidden from view. This has caused researchers, governments, and firms to focus too much on the Schumpeterian idea of innovation as a producer-dominated activity. Free innovation has both advantages and drawbacks. Because free innovators are self-rewarded by such factors as personal utility, learning, and fun, they often pioneer new areas before producers see commercial potential. At the same time, because they give away their innovations, free innovators generally have very little incentive to invest in diffusing what they create, which reduces the social value of their efforts. The best solution, von Hippel and his colleagues argue, is a division of labor between free innovators and producers, enabling each to do what they do best. The result will be both increased producer profits and increased social welfare—a gain for all.
