This book grew from a one-semester course offered for many years to a mixed audience of graduate and undergraduate students who have not had the luxury of taking a course in measure theory. The core of the book covers the basic topics of independence, conditioning, martingales, convergence in distribution, and Fourier transforms. In addition there are numerous sections treating topics traditionally thought of as more advanced, such as coupling and the KMT strong approximation, option pricing via the equivalent martingale measure, and the isoperimetric inequality for Gaussian processes. The book is not just a presentation of mathematical theory, but is also a discussion of why that theory takes its current form. It will be a secure starting point for anyone who needs to invoke rigorous probabilistic arguments and understand what they mean.

Lilly soon learns she has a lot to overcome, but after saving the life of a young miner, she begins to earn the residents' trust. As Lilly becomes torn between joining Paul in Boston and her love for the people of Skip Rock, she crosses paths with a handsome miner—one who seems oddly familiar. Her attraction for him grows, even as she wrestles with her feelings and wonders what he's hiding.
