worse, they're entitled, believing everything should be theirs even if they have not worked hard for it. Meanwhile, parents have given up on parenting, preferring to turn over their children to the government or society to be reared. Al Bruno, Ph.D., a longtime educator and former chaplain, highlights the epidemics that have ravaged our youth in Bricks without Straw. He offers guidance on how to: take back our children, guide them, and teach them about the Lord; prepare children for the difficult life they will face as adults; teach children right from wrong;

instill a love of learning in children. With youth crime surging, a waning work ethic, and children hurling insults at each other at every opportunity, the stakes could not be higher. Whether you're an educator, parent, grandparent, or community leader, you'll grasp the problem and find solutions in this book.

For three school years, from 2007 to 2010, about 200 high-needs New York City public schools participated in the Schoolwide Performance Bonus Program, whose broad objective was to improve student performance through school-based financial

Incentives. An independent analysis of test scores, surveys, and interviews found that the program did not improve student achievement, perhaps because it did not motivate change in educator behavior.

Cassini-Huygens was the most ambitious and successful space journey ever launched to the outer Solar System. This book examines all aspects of the journey: its conception and planning; the lengthy political processes needed to make it a reality; the engineering and development required to build the spacecraft; its 2.2-billion mile journey

from Earth to the Ringed Planet and the amazing discoveries from the mission. The author traces how the visions of a few brilliant scientists matured, gained popularity and eventually became a reality. Innovative technical leaps were necessary to assemble such a multifaceted spacecraft and reliably operate it while it orbited a planet so far from our own. The Cassini-Huygens spacecraft design evolved from other deep space efforts, most notably the Galileo mission to Jupiter, enabling the voluminous, paradigm-shifting scientific data collected by the

spacecraft. Some of these discoveries are absolute gems. A small satellite that scientists once thought of as a dead piece of rock turned out to contain a warm underground sea that could conceivably harbor life. And we now know that hiding under the mist of Saturn's largest moon, Titan, is a world with lakes, fluvial channels, and dunes hauntingly reminiscent of those on our own planet, except that on Titan, it's not water that fills those lakes but hydrocarbons. These and other breakthroughs illustrate why the Cassini-Huygens mission will be remembered as one of
