The Parish Church has not only played a significant part in the life of Leeds, it captures within it the history of the great events and people who together have shaped that city through the centuries. Hundreds of monuments and memorials dating from the Middle Ages to the present day encrust its walls and floors, telling as they do, the part Leeds people have played in that story. Here we see memorials to members of the Leeds Volunteers, formed to offset Napoleon's threatened invasion, and to the men from the city who fought in the Crimea, in South Africa and in two World Wars. Here also we find tributes to hundreds of local men, women and children who lived out their lives in the town; some now forgotten, others nationally famous, like Richard Oastler the 'Factory King'. Now for the first time, those memorials have been captured in Margaret Pullan's pioneering publication, the product of years of devoted research. The range of information offered includes records of births, marriages, and deaths, full inscriptions, background histories explaining why the deceased were buried in the Parish Church and the artistic merits of their tombs. Architectural, ecclesiastical and local historians will find this an invaluable contribution in their respective fields of work whilst the general public will find it gives a fascinating view of the people of Leeds who lived through the years as the old town grew into a major city.

Provides updated, comprehensive, and practical information and guidelines on aspects of building design and construction, including materials, methods, structural types, components, and costs, and management techniques.

The author, a diesel mechanic of many years' experience, presents nine extensively illustrated chapters on the maintenance of marine diesel engines.

The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia, in which groups of leading scientists from a range of topics across biology, chemistry and medicine assembled to present papers and discuss results. The Novartis Foundation, originally known as the Ciba Foundation, is well known to scientists and clinicians around the world.

This paper reviews economic developments in Georgia during 1990-96. Following the implementation of tight financial policies and the liberalization of prices, trade, and the exchange system, growth resumed in 1995 and accelerated in 1996, against the background of a stable exchange rate and declining inflation. At the same time structural reform continued to advance, laying the ground for increased private sector activity and sustained growth in the medium term. Following the introduction of the lari in October 1995, a gradual remonetization of the economy took place, and gross international reserves were replenished.

This one-stop Mega Reference eBook brings together the essential professional reference content from leading international contributors in the automotive field. An expansion the Automotive Engineering print edition, this fully searchable electronic reference book of 2500 pages delivers content to meet all the main information needs of engineers working in vehicle design and development. Material ranges from basic to advanced topics from engines and transmissions to vehicle dynamics and modelling. * A fully searchable Mega Reference Ebook, providing all the essential material needed by Automotive Engineers on a day-to-day basis. * Fundamentals, key techniques, engineering best practice and rules-of-thumb together in one quick-reference. * Over 2,500 pages of reference material, including over 1,500 pages not included in the print edition

Lasers are progressively more used as versatile tools for fabrication purposes. The wide range of available powers, wavelengths, operation modes, repetition rates etc. facilitate the processing of a large spectrum of materials at exceptional precision and quality. Hence, manifold methods were established in the past and novel methods are continuously under development. Biomimetics, the translation from nature-inspired principles to technical applications, is strongly multidisciplinary. This field offers intrinsically a wide scope of applications for laser based methods regarding structuring and modification of materials. This book is dedicated to laser fabrication methods in biomimetics. It introduces both, a laser technology as well as an application focused approach. The book covers the most important laser lithographic methods and various biomimetics application scenarios ranging from coatings and biotechnology to construction, medical applications and photonics.
