THE BESTSELLING CLASSIC ON 'FLOW' – THE KEY TO UNLOCKING MEANING, CREATIVITY, PEAK PERFORMANCE, AND TRUE HAPPINESS
Legendary psychologist Mihaly Csikszentmihalyi's famous investigations of "optimal experience" have revealed that what makes an experience genuinely satisfying is a state of consciousness called flow. During flow, people typically experience deep enjoyment, creativity, and a total involvement with life. In this new edition of his groundbreaking classic work, Csikszentmihalyi ("the leading researcher into 'flow states'" —Newsweek) demonstrates the ways this positive state can be controlled, not just left to chance.
Flow: The Psychology of Optimal Experience teaches how, by ordering the information that enters our consciousness, we can discover true happiness, unlock our potential, and greatly improve the quality of our lives.
"Explores a happy state of mind called flow, the feeling of complete engagement in a creative or playful activity." —Time

High Performance Youth Swimming provides an in-depth view of the physiological, biomechanical, and multifaceted underpinning of swimming success, with a focus on youth. Considerations of both growth and maturation processes and the intricacies of the swimming training environment are core throughout the book. Divided into sections on physiology of swimming, motor control, biomechanics, and long-term well-being, the book also includes chapters from international contributors on: Strength and conditioning Skill acquisition Overtraining Burnout Respiratory health This volume is for those interested in enhancing their art of coaching through a deeper understanding of the science of swimming, including swimming coaches, those who wish – and question how – to best support youth swimming performance, or anyone interested in swimming science more generally.

This volume explores interdependencies between knowledge, action, and space from different interdisciplinary perspectives. Some of the contributors discuss knowledge as a social construct based on collective action, while others look at knowledge as an individual capacity for action. The chapters contain theoretical frameworks as well as experimental outcomes. Readers will gain insight into key questions such as: How does knowledge function as a prerequisite for action? Why are knowledge gaps growing and not diminishing in a knowledge society? How much knowledge is necessary for action? How do various types of knowledge influence the steps from cognition to action? How do different representations of knowledge shape action? What impact have spatial conditions for the formation of knowledge? What is the relationship between social and geographical space? The contributors consider rationality in social and economic theories as well as in everyday life. Attention is also given to action theoretic approaches and rationality from the viewpoints of psychology, post-structuralism, and human geography, making this an attractive book for students, researchers and academics of various backgrounds. This book is open access under a CC BY 4.0 license.

The Exercising Female: Science and Its Application is the first book to provide students, researchers, and professionals with an evidence-based reference on the exceptional scientific issues associated with female participation in sport and exercise. Based on the latest research, and treating women as a unique population, the book seeks to critically evaluate current debates, present the science underpinning female sport and exercise performance, and inform applied practice for the exercising female. Featuring contributions from leading scientists from around the world, and adopting a multidisciplinary approach—from exercise physiology, endocrinology, and biochemistry to psychology, biomechanics, and sociology—the book includes chapters on topics such as: Exercise and the menstrual cycle, contraception, pregnancy, motherhood, and menopause. Body image, exercise dependency, the psychology of sports performance, and homophobia in female sport. The Female Athlete Triad, bone health, musculoskeletal injury, and breast biomechanics. Nutritional requirements for the exercising female, immune function and exercise, and cardiovascular health. Filling a considerable gap in book literature around the science of female sport and exercise, this is crucial reading for any student studying female sport and exercise science, researchers of female sport, and any coach, sport scientist, strength and conditioning coach, sport psychologist, physician, or physiotherapist working with female athletes.

LaForgue's collection of stories, the "Moralites legendaires," freely modernizes established stories of literary tradition according to the stereotypical preoccupations of 1880s Decadence. In this first complete study of the "Moralites" in any language, LaForgue's stories emerge as brilliant examples of parody in its most creative form, among the most original prose creations of the late nineteenth century. LaForgue is known to most English-speaking readers as an influence on T. S. Eliot. In France he is considered a major writer, alongside Symbolist writers such as Baudelaire, Rimbaud, and Mallarmé. LaForgue's stories fully exploit the creative possibilities of parody, and thus make a particularly illuminating contribution, resolving many long-standing theoretical questions. The stories provide a rich source for investigating the procedures of parody and for formulating a sufficiently general and flexible theory to account for the diversity of its form over time. Hannoosh examines the 1880s notion of Decadence with which LaForgue's "Moralites" plays and attempts to revise the prevailing view of the movement to reflect the importance of parody therein. She provides close readings of the six stories: "Hamlet, Le Miracle des Roses, Lohengrin, Salome, Persee et Andromede," and "Pan et la Syrixn." Using an intertextual model of literary theory, Michele Hannoosh derives a theory of the genre overall and addresses the issues raised by metafictional theories of parody from the Russian Formalists onward. Michele Hannoosh is Assistant Professor of French and Comparative Literature at the University of California, Davis. She has written many articles on nineteenth-century French literature and art."
