Offers practice problems and graphics/pictures, chapter summaries, an index, and more resource references."--Publisher website.

This book provides descriptions on functional and aesthetic uses of woody landscape plants, selected ornamental grasses, selected herbaceous materials and more.

This book is a quick and easy-to-use reference guide for choosing plant material for landscape designs. This reference manual includes comprehensive lists with search criteria for each of the major plant groups, including trees, shrubs, groundcovers, perennials, vines, grasses, and ferns. These plant groups contain hundreds of specific species, varieties, and cultivars that are readily available in the marketplace from the major production nurseries. Landscape architects, designers, contractors, or anyone who designs with plants, can easily choose plants that will work on their site. The book is technical enough for the professional, yet simple enough to be used by the layperson. Both botanical and common names are used and an extensive amount of cultural and environmental information is presented. While many other books of this kind give only basic information such as sun/shade, height/width, there are so many as 30 specific categories for each plant group. The categories cover such important criteria as light and soil requirements, zone hardiness, height and width, pest and disease susceptibility, urban tolerance, and tolerance to salt and drought. The lists also include many criteria often overlooked such as growth rates, overall messiness, root systems, minimal fall clean up, maintenance levels, soil PH and landscape value/use, and many visual characteristics such as texture, foliage color and fall colors, bloom colors and seasons, shapes and forms, attractive bark and foliage and more. There is also a candid Pros & Cons section covering some realistic considerations for each of the plant species groups.

Whether you're an experienced landscaper or new to the trade, Mowbiz give you the tools you need to start your own landscaping business and make it a success. This no-nonsense guide reveals the techniques professionals use to keep landscapes looking their best. And it clearly explains the nuts and bolts of running your own profitable business. Each topic has been extensively researched, so your work will be backed by university findings, not guesswork. By pass the trial-and-error school of landscaping, and learn the right way to do things...from the start.--COVER.

Looks at the philosophy and benefits of a holistic approach to landscape design, with information and models on a variety of plant systems, describing how to establish them and care for sustainable plant systems.
