The first practical explanation of how creativity works, this results-oriented bestseller trains listeners to move beyond a "vertical" mode of thought to tap the potential of lateral thinking.

Why do some people always seem to have new ideas while others of equal intelligence never do? Lateral Thinking is Edward de Bono's original portrayal of what lateral thinking is, how it works and how to use it to develop your own potential for thinking and problem solving. First published in 1967 as The Use of Lateral Thinking, this classic international bestseller remains as relevant to learning, problem solving and creative thinking today as when it was first published. De Bono argues that conventional vertical thinking often inhibits our ability to solve problems and come up with new ideas. He then shows that lateral thinking is a far easier and more natural way to generate simple, sound and effective ideas and offers guidance on how to develop your own ability to think laterally. Lateral thinking is a technique that anyone can learn and benefit from.

People spend a fortune on their bodies, their faces, their hair, their clothes. Cosmetics, plastic surgery, diets, gym membership - everyone's trying to be more attractive. But there's an easier way to become a beautiful person. It doesn't have to be physical. No matter how you look, if you have a mind that's fascinating, creative, exciting - if you're a good thinker - you can be beautiful. And being attractive doesn't necessarily come from being intelligent or highly-educated. It isn't about having a great personality. It's about using your imagination and expanding your creativity. And it's when talking with people that we make the greatest impact. A person may be physically beautiful, but when speaking to others a dull or ugly or uncreative mind will definitely turn them off. In clear, practical language, de Bono shows how by applying lateral and parallel thinking skills to your conversation you can improve your mind. By learning how to listen, make a point, and manoeuvre a discussion, you can become creative and more appealing - more beautiful.

The intelligence, experience and information of everyone is harnessed to reach the right conclusions quickly. These principles fundamentally change the way you work and interact. They have been adopted by businesses and governments around the world to end conflict and confusion in favour of harmony and productivity.

In Practical Thinking de Bono's theme is everyday thinking, how the mind actually works - not how philosophers think it should. Based on the results of his famous Black Cylinder Experiment (a critical thinking task that asks participants why they think a black cylinder falls over), de Bono explores the four practical ways of being right. From there he picks out and names the five levels of understanding - and the five major mistakes in thinking. From memes and Instagram to twitter and bestselling books like Mistakes I Made At Work, mistakes - and what we can learn from them - are a hot topic. With Edward you'll learn exactly why we all make them.

Western thinking is falling because it was not designed to deal with change In this provocative masterpiece of creative thinking, Edward de Bono argues for a game-changing new way to think. For thousands of years we have followed the thinking system designed by the Greek philosophers Socrates, Plato and Aristotle, based on analysis and argument. But if we are to flourish in today's rapidly changing world we need to free our minds of these "boxes" and embrace a more flexible and nimble model. Parallel Thinking is an invaluable insight into the word of creativity; de Bono unveils unique methods of brainstorming and explains preconceived ideas of what creativity involves and is. This book is not about philosophy; it is about the practical (and parallel) thinking required to get things done in an ever-changing world.
