As demographic trends shift toward an aging population, there is a growing need for improved mental health treatment for older adults. With depression as the leading mental health concern in later life, one of the greatest challenges for treatment providers is the wide variability of life circumstances that accompany depressive symptoms for clients across outpatient mental health, integrated primary care, and inpatient psychiatric settings. Treating Later-Life Depression: Clinician Guide outlines culturally responsive practices that target the contexts and drivers/antecedents of depression in middle-aged and older adults. Clinicians can choose research-supported modules from the accompanying Workbook that fit the needs of their clients (i.e. chronic pain, sleep problems, anxiety, experiences of loss). This practical guide reflects continuing international scientific and clinical advances in applying CBT to age-related problems using individual and group formats, with clinician-tested recommendations for telehealth practice. With the flexible clinical tools provided in this guide, practitioners can personalize the application of change strategies, including behavioral activation, relaxation training, self-compassion, cognitive reappraisal, and communication skills training among others. Case examples are also provided from a range of disciplines (e.g., clinical psychology, psychiatry, social work, counseling, marriage and family therapy, nursing, occupational therapy and recreational specialists) to illustrate application in busy clinical practices. The guide closes with aging-friendly assessment tools and other resources to support ongoing professional development. Treating Later-Life Depression, Clinician Guide is an indispensable resource for all behavioral health providers who wish to help diverse aging clients thrive effectively and efficiently in a daily life that is true to their values and personal strengths.

The Psychology of Racing for Dinghies and Keelboats is an inspirational practical guide to mind training for racing sailors. Aimed at aspiring dinghy sailors as well as yacht racers, the style is light, friendly and conversational - designed to inspire, guide and promote positive analytical thinking amongst racers of all levels, with the aim of helping them find the inner resolve and mental strength required to be a winner. Packed with tables, tick boxes and exercises as well as thought-provoking quotes from successful international sailors, it is delightfully free of psychobabble and tedious theory - a really practical guide that will be invaluable to all racers of all levels and abilities.

You've taken your introduction to evaluation course and are about to do your first evaluation project. Where do you begin? Interactive Evaluation Practice: Managing the Interpersonal Dynamics of Program Evaluation helps bridge the gap between the theory of evaluation and its practice, giving students the specific skills they need to use in different evaluation settings. Jean A. King and Laurie Stevahn present readers with three organizing frameworks (derived from social interdependence theory from social psychology, evaluation use research, and the evaluation capacity building literature) for thinking about evaluation practice. These frameworks help readers track the various skills or strategies to use for distinctive evaluation situations. In addition, the authors provide explicit advice about how to solve specific evaluation problems. Numerous examples throughout the text bring interactive practice to life in a variety of settings.

Students who are beginning studies in technology need a strong foundation in the basics before moving on to more advanced technology courses and certification programs. The Microsoft Technology Associate (MTA) is a new and innovative certification track designed to provide a pathway for future

success in technology courses and careers. The MTA program curriculum helps instructors teach and validate fundamental technology concepts and provides students with a foundation for their careers as well as the confidence they need to succeed in advanced studies. Through the use of MOAC MTA titles you can help ensure your students future success in and out of the classroom. Vital fundamentals of security are included such as understanding security layers, authentication, authorization, and accounting. They will also become familiar with security policies, network security and protecting the Server and Client.

Reflecting on Practice for STEM Educators is a guidebook to lead a professional learning program for educators working in STEM learning environments. Making research on the science of human learning accessible to educational professionals around the world, this book shows educators how to relate this research to their own practice. Educators' collective work broadens the scope of an organization's reach, and through this effort, the organization grows its social capital in its local community and beyond. This book offers opportunities to engage in processes that lead toward organizational learning by attending to the professional growth of the educators. Tran and Halversen show how learning together can shape the language and meanings by which educators do and talk about their work to support visitors' experiences. The book provides guidance on how teams of educators can build community as they engage in reflective practice. Reflecting on Practice for STEM Educators will be essential reading for leaders of any organization that aims to educate and engage the public in science, technology, engineering, and mathematics. It will be particularly useful to educators who work in museums, zoos, aquariums, botanical gardens, youth organizations, after-school programs, and nature, science, and conservation centres.
