What do walking, weaving, observing, storytelling, singing, drawing and writing have in common? The answer is that they all proceed along lines. In this extraordinary book Tim Ingold imagines a world in which everyone and everything consists of interwoven or interconnected lines and lays the foundations for a completely new discipline: the anthropological archaeology of the line. Ingold's argument leads us through the music of Ancient Greece and contemporary Japan, Siberian labyrinths and Roman roads, Chinese calligraphy and the printed alphabet, weaving a path between antiquity and the present. Drawing on a multitude of disciplines including archaeology, classical studies, art history, linguistics, psychology, musicology, philosophy and many others, and including more than seventy illustrations, this book takes us on an exhilarating intellectual journey that will change the way we look at the world and how we go about in it. This Routledge Classics edition includes a new preface by the author.

To live, every being must put out a line, and in life these lines tangle with one another. This book is a study of the life of lines. Following on from Tim Ingold's groundbreaking work *Lines: A Brief History*, it offers a wholly original series of meditations on life, ground, weather, walking, imagination and what it means to be human. In the first part, Ingold argues that a world of life is woven from knots, and not built from blocks as commonly thought. He shows how the principle of knotting underwrites both the way things join with one another, in walls, buildings and bodies, and the composition of the ground and the knowledge we find there. In the second part, Ingold argues that to study living lines, we must also study the weather. To complement a linealogy that asks what is common to walking, weaving, observing, singing, storytelling and writing, he develops a meteorology that seeks the common denominator of breath, time, mood, sound, memory, colour and the sky. This denominator is the atmosphere. In the third part, Ingold carries the line into the domain of human life. He shows that for life to continue, the things we do must be framed within the lives we undergo. In continually answering to one another, these lives enact a principle of correspondence that is fundamentally social. This compelling volume brings our thinking about the material world refreshingly back to life.

While anchored in anthropology, the book ranges widely over an interdisciplinary terrain that includes philosophy, geography, sociology, art and architecture.

Rather than explaining our origins, A Brief History of Tim addresses our history and culture at the level we most deeply desire - the trivial. By simply removing one letter, the world is tweaked with immensely enjoyable results: For those who think contemporary art is a load of rubbish, there's the Tat Modern. Find out about the Ancient Geeks, nerdy types who spent far too much time doing maths. A Brief History of Tim is laugh-out-loud funny and will have you looking at the world through fresh eyes.

We inhabit a world of more than humans. For life to flourish, we must listen to the calls this world makes on us, and respond with care, sensitivity and judgement. That is what it means to correspond, to join our lives with those of the beings, matters and elements with whom, and with which, we dwell upon the earth. In this book, anthropologist Tim Ingold corresponds with landscapes and forests, oceans and skies, monuments and artworks. To each he brings the same spontaneity of thought and observation, the same intimacy and lightness of touch, but also the same affection, longing and care that, in the days when we used to write letters by hand, we would bring to our correspondences with one another. The result is a profound yet accessible inquiry into ways of attending to the world around us, into the relation between art and life, and into the craft of writing itself. At a time of environmental crisis, when words so often seem to fail us, Ingold points to how the practice of correspondence can help restore our kinship with a stricken earth.

The dramatic human story of an epic scientific quest and of one man's forty-year obsession to find a solution to the thorniest scientific dilemma of the day--"the longitude problem." Anyone alive in the eighteenth century would have known that "the longitude problem" was the thorniest scientific dilemma of the day-and had been for centuries. Lacking the ability to measure their longitude, sailors throughout the great ages of exploration had been literally lost at sea as soon as they lost sight of land. Thousands of lives and the increasing fortunes of nations hung on a resolution. One man, John Harrison, in complete opposition to the scientific community, dared to imagine a mechanical solution-a clock that would keep precise time at sea, something no clock had ever been able to do on land. Longitude is the dramatic human story of an epic scientific quest and of Harrison's forty-year obsession with building his perfect timekeeper, known today as the chronometer. Full of heroism and chicanery, it is also a fascinating brief history of astronomy, navigation, and clockmaking, and opens a new window on our world.

"A fascinating history of [a craft] that preceded and made possible civilization itself." [New York Times Book Review](#) New discoveries about the textile arts reveal women's unexpectedly influential role in ancient societies. Twenty thousand years ago, women were making and wearing the first clothing created from spun fibers. In fact, right up to the Industrial Revolution the fiber arts were an enormous economic force, belonging primarily to women. Despite the great toil required in making cloth and clothing, most books on ancient history and economics have no information on them. Much of this gap results from the extreme perishability of what women produced, but it seems clear that until now descriptions of prehistoric and early historic cultures have omitted virtually half the picture. Elizabeth Wayland Barber has drawn from data gathered by the most sophisticated new archaeological methods—methods she herself helped to fashion. In a "brilliantly original book" (Katha Pollitt, [Washington Post Book World](#)), she argues that women were a powerful economic force in the ancient world, with

their own industry: fabric.

One of the world's most beloved and bestselling writers takes his ultimate journey -- into the most intriguing and intractable questions that science seeks to answer. In *A Walk in the Woods*, Bill Bryson trekked the Appalachian Trail -- well, most of it. In *In A Sunburned Country*, he confronted some of the most lethal wildlife Australia has to offer. Now, in his biggest book, he confronts his greatest challenge: to understand -- and, if possible, answer -- the oldest, biggest questions we have posed about the universe and ourselves. Taking as territory everything from the Big Bang to the rise of civilization, Bryson seeks to understand how we got from there being nothing at all to there being us. To that end, he has attached himself to a host of the world's most advanced (and often obsessed) archaeologists, anthropologists, and mathematicians, travelling to their offices, laboratories, and field camps. He has read (or tried to read) their books, pestered them with questions, apprenticed himself to their powerful minds. *A Short History of Nearly Everything* is the record of this quest, and it is a sometimes profound, sometimes funny, and always supremely clear and entertaining adventure in the realms of human knowledge, as only Bill Bryson can render it. Science has never been more involving or entertaining.

Rose Book of Bible and Christian History Time Lines is one of the top Bible timelines sold through Christian bookstores. It includes 20 feet of time lines in one beautiful hard-bound book! Compare Bible history, world history, and Middle Eastern rulers and empires side by side. Then unfold this giant Bible Timeline poster and put it up on the wall or down the church hallway. This dramatic timeline is guaranteed to grab people's attention in Bible study and adult Sunday school. This incredible Bible timeline not only covers events from Genesis to Revelation, it also covers all of church history, including the expansion of Christianity, and persecution of Christians around the world, as well as the history of Bible translation.

An integrated approach to understanding how people live, learn, work in and perceive their environments.

To live, every being must put out a line, and in life these lines tangle with one another. This book is a study of the life of lines. Following on from Tim Ingold's groundbreaking work *Lines: A Brief History*, it offers a wholly original series of meditations on life, ground, weather, walking, imagination and what it means to be human.
