The Pharma 500 is a list that ranks the 500 largest pharmaceutical companies in the world by value as of May 15, 2018. This list includes publicly traded pharmaceutical companies across the world and many privately-held companies for which revenue information is available. This list is designed to provide you with a guide to the pharmaceutical industry that goes beyond generalities and paints a picture of the state of industry at a point in time.

Join journalist Barry Werth as he pulls back the curtain on Vertex, a start-up pharmaceutical company, and witness firsthand the intense drama being played out in the pioneering and hugely profitable field of drug research. Founded by Joshua Boger, a dynamic Harvard- and Merck-trained scientific whiz kid, Vertex is dedicated to designing -- atom by atom -- both a new life-saving immunosuppressant drug, and a drug to combat the virus that causes AIDS. You will be hooked from start to finish, as you go from the labs, where obsessive, fiercely competitive scientists struggle for a breakthrough, to Wall Street, where the wheeling and dealing takes on a life of its own, as Boger courts investors and finally decides to take Vertex public. Here is a fascinating no-holds-barred account of the business of science, which includes an updated epilogue about the most recent developments in the quest for a drug to cure AIDS.

Gary Gereffi first explains how foreign corporations took over the flourishing Mexican steroid industry in the 1950s and 1960s and thwarted the country's later attempts to establish a more

In the context of life and civilization, the pharmaceutical industry is as old as human existence. Since time immemorial India had its own enriched indigenous tradition of medicine. The development of alchemy and its application for human welfare was also an important step in Indian scientific tradition. The present monograph is an innovative attempt to understand the history of the indigenous pharmaceutical companies in Calcutta during the colonial times. Here pharmaceutical companies have been viewed as an illuminating lens to understand the interconnectedness between Indian traditions of thought and Western science and subsequent development of pharmaceutical industry in colonial India. The entire gamut of discussion centres around the issues of medical education, medical services, public health, pharmaceutical profession and politico-economic contexts of the development of pharmaceutical industry in colonial India. Three indigenous pharmaceuticals namely – Butto Krishna Paul & Co., Bengal Chemical & Pharmaceutical Works Limited, and East India Pharmaceutical Works Limited have been studied. The study not only portrays the politico-economic background to the

emergence of the pharmaceutical industry in colonial India but links it to the economic nationalism and the quest for self-sufficiency among Indian nationalists and entrepreneurs. The pharmaceutical industry in India can be symbolic of a cultural response to modern science which was to pave the subsequent trajectory of national scientific endeavours in India. Award-winning journalist and New York Times bestselling author Gerald Posner reveals the heroes and villains of the trillion-dollar-a-year pharmaceutical industry and delivers "a withering and encyclopedic indictment of a drug industry that often seems to prioritize profits over patients (The New York Times Book Review). Pharmaceutical breakthroughs such as antibiotics and vaccines rank among some of the greatest advancements in human history. Yet exorbitant prices for life-saving drugs, safety recalls affecting tens of millions of Americans, and soaring rates of addiction and overdose on prescription opioids have caused many to lose faith in drug companies. Now, Americans are demanding a national reckoning with a monolithic industry. "Gerald's dogged reporting, sets Pharma apart from all books on this subject" (The Washington Standard) as we are introduced to brilliant scientists, incorruptible government regulators, and brave whistleblowers facing off against company executives often blinded by greed. A business that profits from treating ills can create far deadlier problems than it cures. Addictive products are part of the industry's DNA, from the days when corner drugstores sold morphine, heroin, and cocaine, to the past two decades of dangerously overprescribed opioids. Pharma also uncovers the real story of the Sacklers, the family that became one of America's

wealthiest from the success of OxyContin, their blockbuster narcotic painkiller at the center of the opioid crisis. Relying on thousands of pages of government and corporate archives, dozens of hours of interviews with insiders, and previously classified FBI files, Posner exposes the secrets of the Sacklers' rise to power—revelations that have long been buried under a byzantine web of interlocking companies with ever-changing names and hidden owners. The unexpected twists and turns of the Sackler family saga are told against the startling chronicle of a powerful industry that sits at the intersection of public health and profits. "Explosively, even addictively, readable" (Booklist, starred review), *Pharma* reveals how and why American drug companies have put earnings ahead of patients.

The definition of Market Access was first reported by the World Trade Organization as "to open markets for trade and improve transparency, reciprocity, and non-discrimination in international trade". Pharmaceutical Market Access is different and it could be defined as achieving the optimal price for a product or service and/or the maximum reimbursement for the approved target population with no restrictions on funding for the medical technology. By the way, Market Access is not only the market authorization, but it also includes overlapping activities like pricing, health technology assessment, formulary, and reimbursement. Market Access is one of the most important activities for pharmaceutical companies and emerging countries represent an important opportunity for launching new products. It was reported that the Compounded Average Growth Rate (CAGR) was 6.0% in the period 2011-2017, and expected sales exceeding 1.1 trillion USD by 2017 for emerging countries. Furthermore, CAGR 2008-2012 for recently launched pharmaceuticals were 9.8% for emerging countries and 1.5% for the top 8

developed countries. The Market Access processes in the most important emerging countries in the selected regions are defined in this book with the aim to help local experts, local government officers, headquarter managements, and everyone who want to learn more about healthcare system and health policies pathways of Market Access, mapping and structure of decision makers, challenges and catalyzers for Market Access in the emerging countries.

An exposé of the corruption of medicine by the pharmaceutical industry at every level, from exploiting the vulnerable destitute for drug testing, through manipulation of research data, to disease mongering and promoting drugs that do more harm than good. Authors, Professor Jon Jureidini and Dr Leemon McHenry, made critical contributions to exposing the scientific misconduct in two infamous trials of antidepressants. Ghostwritten publications of these trials were highly influential in prescriptions of paroxetine (Paxil) and citalopram (Celexa) in paediatric and adolescent depression, yet both trials (Glaxo Smith Kline's paroxetine study 329 and Forest Laboratories' citalopram study CIT-MD-18) seriously misrepresented the efficacy and safety data. *The Illusion of Evidence-Based Medicine* provides a detailed account of these studies and argues that medicine desperately needs to re-evaluate its relationship with the pharmaceutical industry. Without a basis for independent evaluation of the results of randomised, placebo-controlled clinical trials, there can be no confidence in evidence-based medicine. Science demands rigorous, critical examination and especially severe testing of hypotheses to function properly, but this is exactly what is lacking in academic medicine.
