The concept of »worldmaking« is based on the idea that 'the world' is not given, but rather produced through language, actions, ideas and perception. This collection of essays takes a closer look at various hybrid and disparate worlds related to dance and choreography. Coming from a broad range of different backgrounds and disciplines, the authors inquire into the ways of producing 'dance worlds': through artistic practice, discourse and media, choreographic form and dance material. The essays in this volume critically reflect the predominant topos of dance as something fleeting and ephemeral – an embodiment of the Other in modernity. Moreover, they demonstrate that there is more than just one universal »world of dance«, but rather a multitude of interrelated dance worlds with more emerging every day.

The old masters of dealt only with the static features of the positional rules of chess. But these are insufficient to explain the basics of chess. The problem is that chess, like in other sciences, has undergone a dynamic revolution, but chess literature doesn't yet reflect it. In this major work Aagaard accessibly explains the rules of attack (the exploitation of a dynamic advantage), balanced between understandable examples, and deep analysis. Five years in the making, this book deals with weak kings, sacrifices, various minor attacking themes, intuitive sacrifices, opposite castling, modern king hunts, and enduring initiative.

Introduction to Mechatronic Design is ideal for upper level and graduate Mechatronics courses in Electrical, Computing, or Mechanical & Aerospace Engineering. Unlike other texts on mechatronics that focus on derivations and calculations, Introduction to Mechatronics, 1e, takes a narrative approach, emphasizing the importance of building intuition and understanding before diving into the math. The authors believe that integration is the core of mechatronics and students must have a command of each of the domains to create the balance necessary for successful mechatronic design and devote sections of the book to each area, including mechanical, electrical, and software disciplines, as well as a section on system design and engineering. A robust package of teaching and learning resources accompanies the book.

The past comes back to haunt black ops specialist Sean Dillon and his colleagues in this New York Times bestselling novel of terrorism, revenge, and a very old nemesis... On a dark summer night, two Chechen mercenaries emerge from the waters off Nantucket to kill a high-value target, the former President of the United States. Unfortunately for them, the president has guests that night, including Sean Dillon and his colleague, Afghan war hero Captain Sara Gideon. The Chechens do not survive the night, but Dillon is curious about how they even got on the island. What he discovers sends a chill through his bones—a name from Dillon's distant past. If this man is working with the terrorists now, the assassination attempt is only the beginning—and next time, the results may be much, much different.
