Leading scholars investigate the profession of academic economics, with a focus on the intellectual environment and incentives for economic research.

This volume provides a rigorous introduction to models and concepts, keeping the use of calculus simple and clear, and offering many graphs and diagrams to help bring the text to life. Focusing on the key issues, the text explains why economic activity exists, the best ways to carry it out, what might be done to improve its efficiency, how one can predict the effect of changes of various kinds, and why government intervention into economic activity might be beneficial. The premise that economic activity stems from the need for different people to trade different resources is illustrated throughout by numerous examples.

## Download Ebook Microeconomics Bernheim Whinston Solutions

This book provides a comprehensive introduction to modern auction theory and its important new applications. It is written by a leading economic theorist whose suggestions guided the creation of the new spectrum auction designs. Aimed at graduate students and professionals in economics, the book gives the most up-to-date treatments of both traditional theories of 'optimal auctions' and newer theories of multi-unit auctions and package auctions, and shows by example how these theories are used. The analysis explores the limitations of prominent older designs, such as the Vickrey auction design, and evaluates the practical responses to those limitations. It explores the tension between the traditional theory of auctions with a fixed set of bidders, in which the seller seeks to squeeze as much revenue as possible from the fixed set, and the theory of auctions with endogenous entry, in which bidder profits must be respected to encourage participation.

An account of the economics behind antitrust law, discussing recent developments in the areas of price fixing, horizontal mergers, and exclusionary vertical contracts.
