The naturalist's lot is not an easy one. To suggest that persons engage

"Showing how science is limited by its dominant mode of investigation, Lincoln and Guba propose an alternative paradigm--a "naturalistic" rather than "rationalistic" method of inquiry--in which the investigator avoids manipulating research outcomes. A "paradigm shift" is under way in many fields, they contend, and go on to describe the different assumptions of the two approaches regarding the nature of reality, subject-object interaction, the possibility of generalization, the concept of causality, and the role of values. The authors also offer guidance for research in the field (where, they say, naturalistic inquiry always takes place). Useful tips are given, for example, on "designing" a study as it unfolds, establishing "trustworthiness," and writing a case report. This book helps researchers "both to understand and to do naturalistic inquiry." Of particular interest to educational researchers, it is valuable for all social scientists involved with questions of qualitative and quantitative

methodology."--Publisher's description.

Naturalistic Inquiry provides social scientists with a basic but comprehensive rationale for non-positivistic approaches to research. It confronts the basic premise underlying the scientific tradition that all questions can be answered by employing empirical, testable, replicable research techniques. The authors maintain that there are scientific facts that existing paradigms cannot explain, and argue against traditional positivistic inquiry. They suggest an alternative approach supporting the use of the naturalistic paradigm.

The Constructivist Credo is a set of foundational principles for those wishing to conduct social science research within the constructivist paradigm. They were distilled by Yvonna Lincoln and Egon Guba from their many writings on this topic and are provided in the form of 150 propositional statements. After Guba's death in 2008, the Credo was completed by Lincoln and is presented here. In addition to the key principles of constructivist thought, the volume also contains an introduction to constructivism, an intellectual biography and complete bibliography of Guba's work, and a case study using constructivism, showing how the paradigm can be applied to a research study.

In the field of social work, qualitative research is starting to gain more prominence as are mixed methods and various issues regarding race, ethnicity and gender. These changes in the field are reflected and updated in *The Handbook of Social Work Research Methods, Second Edition*. This text contains meta analysis, designs to evaluate treatment and provides the support to help students harness the power of the Internet. This handbook brings together leading scholars in research methods in social work.

Publisher's description: Fourth Generation Evaluation represents a monumental shift in evaluation practice. Guba and Lincoln point to the inherent problems faced by previous generations of evaluators--politics, ethical dilemmas, imperfections and gaps, inconclusive deductions--and lay the blame for failure and nonutilization at the feet of the unquestioned reliance on the scientific/positivist paradigm of research. Fourth Generation Evaluation, a more informed and sophisticated approach, moves beyond science to include the myriad human, political, social, cultural, and contextual elements that are involved. Based upon relativism, a unity between knower and known, and a subjective epistemology, the authors show how fourth generation evaluation unites the evaluator and the stakeholders in an interaction that creates the product of the evaluation. Differing from previously existing generations, this new approach moves evaluation to a new level, whose key dynamic is

Get Free Naturalistic Inquiry Lincoln Guba Book

negotiation. The constructivist paradigm is espoused by the authors and shown to offer multiple advantages, including empowerment and enfranchisement of stakeholders, as well as an action orientation that defines a course to be followed. Not merely a treatise on evaluation theory, Guba and Lincoln also comprehensively describe the differences between the positivist and constructivist paradigms of research, and provide a practical plan of the steps and processes in conducting a fourth generation evaluation.

The transition from viewing organizations as bureaucracies towards seeing them in metaphoric terms is a contemporary break with past organizational theory. But to investigate the similarities between real organizations and the metaphors describing their functions and context, a shift in both methods of inquiry and organizational theory must take place. This volume explores the paradigm shift at three levels: an overview of historical roots; an explication of terminology, metaphors and constructs; and the practical application of these new organizational inquiry methods, especially for actual research practices and policy analysis applications.

Offers a new model of evaluation that combines two emerging streams of thought: responsive evaluation and naturalistic methodologies. In effect, the information provided relates to the needs of a particular audience and grows out of situations at hand rather than a predetermined design. Includes a new preface.

In this Fourth Edition of The SAGE Dictionary of Qualitative Inquiry Thomas A. Schwandt provides a guide to the terms and phrases that help shape the origins, purpose, logic, meaning, and methods of the practices known as qualitative inquiry. This edition features 20 additional terms as well as a restructured Reader's Guide. Key references have been updated and select terms and phrases from previous editions have been reorganized and greatly expanded. Together, the dictionary entries provide a guide to the methodological and epistemological concepts and theoretical orientations of qualitative inquiry. This one-of-a-kind resource is ideal for readers who are navigating various perspectives on qualitative inquiry, working on a qualitative dissertation, or are launching their own investigations into the issues covered.

Based on the theoretical work of Lincoln and Guba, this practical text is designed to help new researchers apply the constructivist paradigm. The authors show how these ideas shape the practice of conducting alternative paradigm research. Covering the research process from design, through data-collection analysis and presentation, as well as important issues generally minimized in positivist research texts - ethics, trustworthiness and authenticity - cases from a wide variety of disciplines

demonstrate the efficacy of the methods described.

What is qualitative secondary analysis? How can it be most effectively applied in social research? This timely and accomplished book offers readers a well informed, reliable guide to all aspects of qualitative secondary analysis. The book:

- Defines secondary analysis
- Distinguishes between quantitative and qualitative secondary analysis
- Maps the main types of qualitative secondary analysis
- Covers the key ethical and legal issues
- Offers a practical guide to effective research
- Sets the agenda for future developments in the subject

Written by an experienced researcher and teacher with a background in sociology, the book is a comprehensive and invaluable introduction to this growing field of social research.
