Android on x86: an Introduction to Optimizing for Intel® Architecture serves two main purposes. First, it makes the case for adapting your applications onto Intel's x86 architecture, including discussions of the business potential, the changing landscape of the Android marketplace, and the unique challenges and opportunities that arise from x86 devices. The fundamental idea is that extending your applications to support x86 or creating new ones is not difficult, but it is imperative to know all of the technicalities. This book is dedicated to providing you with an awareness of these nuances and an understanding of how to tackle them. Second, and most importantly, this book provides a one-stop detailed resource for best practices and procedures associated with the installation issues, hardware optimization issues, software requirements, programming tasks, and performance optimizations that emerge when developers consider the x86 Android devices. Optimization discussions dive into native code, hardware acceleration, and advanced profiling of multimedia applications. The authors have collected this information so that you can use the book as a guide for the specific requirements of

each application project. This book is not dedicated solely to code; instead it is filled with the information you need in order to take advantage of x86 architecture. It will guide you through installing the Android SDK for Intel Architecture, help you understand the differences and similarities between processor architectures available in Android devices, teach you to create and port applications, debug existing x86 applications, offer solutions for NDK and C++ optimizations, and introduce the Intel Hardware Accelerated Execution Manager. This book provides the most useful information to help you get the job done quickly while utilizing best practices. What you'll learn

The development-relevant differences between Android on ARM and Android on Intel x86
How to set up the SDK for an emulated Intel Android device
How to build the Android OS for the Intel Mobile Processor
How to create new x86 based Android applications, set up testing and performance tuning, and port existing Android applications to work with the x86 processor
How to debug problems they encounter when working on the x86 Android test platform
Intricacies of the Intel Hardware Accelerated Execution Manager. The reader will also gain significant insight into the OpenGL Android support. Who this book is for

Future mobile access networks will require upgraded telecommunications networks; 3G LTE/ SAE is the next step, allowing data rates above 100 Mbps. Telecommunications engineers will need to understand the new SAE/ EPC architecture and its tendency towards automatic configuration, but the complexity, length and dryness of the standards documents make it difficult for them to find the information they need and work out how to apply it to their daily product and network development. This book - a new edition of SAE and the Evolved Packet Core - provides clear, concise and comprehensive coverage of the entire SAE/ EPC architecture, explaining concepts and standards and how they are used in commercial service settings. More than just a précis of the standards, it gives real insight into their development and the real-world scenarios in which they have been used since the publication of the first edition. This second edition places more emphasis on key aspects such as mobile systems and protocols (Diameter, GTP, S1-AP), and includes new coverage of femtocells, SIPTO, LIPA, LTE relay and LTE Advanced. Up-to-date coverage of SAE including the latest standards development

Easily accessible overview of the architecture and concepts defined by SAE
Thorough description of the Evolved Packet Core for LTE, fixed and other wireless accesses
Comprehensive explanation of SAE key concepts, security and Quality-of-Service
Covers potential service and operator scenarios including interworking with existing 3GPP and 3GPP2 systems
Detailed walkthrough of network entities, protocols and procedures
Written by established experts in the SAE standardization process, all of whom have extensive experience and understanding of its goals, history and vision

'It all began in Cambridge. We were gathered there for the Alumni Weekend, when a thousand elderly graduates return to hear lectures from the great minds of the 21st century.' This sets Nott pondering his own mortality, the environment, but more importantly, climate change. Will the gloom mongers be proved right? This is serious stuff, but quickly spirals into fantasy. A mixture of fact, fantasy, imagination and truth, Sir John's writing is extremely funny: one premised on a serious subject but written with an ironic, irreverent twist.

An illuminating portrait of contemporary Japan by the Asia editor of the Financial Times bases his observations on a cross-section of Japanese citizenry while evaluating such major events as the World War II atom bombings, the 1990 economic recession and the earthquake, tsunami and nuclear meltdown disasters of 2011.

The introduction of high-speed serial communication links and general purpose VLSI routers offers new opportunities in system design. C104 routers can be used to construct high throughput, low latency interconnection networks for use in telecommunications, parallel computers and electronic systems in general. The T9000 transputer with its integrated communication links can be connected directly to these networks, providing high performance data-handling, protocol conversion and network control. This text concentrates on aspects related to scaleable, general purpose, high-performance computing, low-latency message-passing and parallel processing.
