In recent years there has been a great surge of interest in the area of oral motor assessment and treatment. It almost seems as if an "oral motor explosion" has occurred, and the speech-language pathologists is left wondering Where do I begin? Where can I find appropriate and adequate training in this area? What tools and materials should I buy? What techniques should I use? This book will answer all these questions and many more. Chapters include: Anatomical and Neurological Bases, Physiological Considerations, Key Issues and Treatment Considerations, Birth to 2-year Period Assessment and Treatment, 2- to 4-year Period Assessment and Treatment, 4- to 6-year Period Assessment and Treatment, 6- to 12-year Period Assessment and Treatment, Adolescent and Adult Assessment and Treatment, Report Writing, and Resources and Product Sources. For practicing clinicians in assessment and treatment of oral motor concerns in clients of all ages with a variety of disorders.

Sara Rosenfeld-Johnson developed this home learning system in collaboration with Susan Money, SLP. Designed to supplement "Oral-Motor Exercises for Speech Clarity," school-based speech and language pathologists achieve optimal results by assigning daily exercises for parents and children to complete together. A superb addition to your speech therapy program.

Nobody Ever Told Me (Or My Mother) That! : Everything from Bottles and Breathing to Healthy Speech Development fills a missing niche in the child rearing world. It explains everything from the basics of nursing, to SIDS, to facial massage, finishing with the secrets to good speech development and your child's best natural appearance. Written by an SLP with over 30 years experience, this book is a wealth of necessary information for any new parent.

This manual features games, rhymes, and manipulative tasks to help preschool and primary school children with hearing impairment, oral dyspraxia, and articulation problems. The games target higher organizational levels of motor planning for oral motor skills. These activities provide a natural focus on the mouth, an approach that can be shared with children who do not have disabilities. Games include saying silly sentences and rhymes and making funny faces.

Sara Rosenfeld-Johnson ' s step-by-step task analysis approach to Oral-Motor Exercises for Speech Clarity insures success. Although the ultimate goal of each exercise is to improve speech clarity, feeding skills and saliva control are addressed along the way. Her hands-on approach is captured in this exceptional book designed for interactive use between therapists, clients, and parents.

This is an in-depth study of the development of the typical infant during the first year of life. Information is grouped into the areas of postural control, gross motor skills, fine motor skills, oral-motor and respiratory functions, and speech and language. Each chapter includes a summary chart and many clear illustrations. Concepts underlying the development of movement are presented, including motor learning concepts.

In response to the need for a reliable and valid assessment tool, the Schedule for Oral Motor Assessment (SOMA) was designed. It was developed and validated on a large sample of normally developing infants as well as infants with clinically significant oral motor dysfunction. The SOMA is simple to administer and quick to score, and can be performed in the clinic, nursery, school or the child's home. It entails the presentation of a range of tastes and textures to the infant in order to elicit a full range of each oral motor challenge categories, ranging from liquid through to chewable solids. Specific oral motor behaviours are rated for each oral motor challenge category. Responses are summed to obtain a score for each category, enabling the speech and language therapist to distinguish those infants with normal oral motor function from those with oral motor dysfunction.
