Orthodontics is both art and science. The art is more human, while science is more machine. As I have suggested before, our future is not so much human vs. machine, but human enhanced by machine. Like many areas of life, a good balance of both acts helps to design a model that gains in efficiency AND experience.

Orthodontics at a Glance is part of the highly popular at a Glance series. It provides a concise and accessible introduction and revision aid. Following the familiar, easy-to-use at a Glance format, each topic is presented as a double-page spread with key facts accompanied by clear diagrams encapsulating essential knowledge. Structured over four sections, Orthodontics at a Glance covers: Craniofacial growth and development Diagnosis and treatment planning The management of malocclusion Treatment techniques Orthodontics at a Glance is the ideal companion for all students of dentistry, junior clinicians and those working towards orthodontic specialization. In addition the text will provide valuable insight for general dental practitioners wanting to update their orthodontic knowledge, orthodontic nurses, therapists and technicians.

This richly illustrated book is a wide-ranging guide to modern diagnostics and treatment planning in orthodontics, which are

mandatory prior to the initiation of any type of comprehensive treatment. The importance of three-dimensional (3D) imaging techniques has been increasingly recognized owing to the shortcomings of conventional two-dimensional imaging in some patients, such as those requiring complex adult treatment and those with temporomandibular joint dysfunctions or sleep disturbances. In the first part of this book, readers will find clear description and illustration of the diagnostic role of the latest 3D imaging techniques, including cone beam computed tomography, intra-oral scanning, and magnetic resonance imaging. The second part explains in detail the application of 3D techniques in treatment planning for orthodontic and orthognathic surgery. Guidance is also provided on the use of image fusion software for the purposes of accurate diagnosis and precise design of the most appropriate biomechanical approach in patients with malocclusions.
