The new Mk 4 Osprey body armor is a huge evolutionary step for the British Soldier and will make its combat debut this Fall in Afghanistan on the backs of the 16th Air Assault Brigade. In addition to better protection, some of the improvements over the current version include non-skid shoulders, the plate is now carried in a pocket inside the vest making it less bulky, and has a new ribbed material lining to improve breathability.

Fighting an elusive and dangerous enemy far from home, the British army in Afghanistan has been involved in asymmetric warfare for the best part of a decade. The eight-year series of deployments jointly known as Operation Herrick, alongside US and other NATO contingents within the International Security Assistance Force (ISAF) in Afghanistan, have been the longest continuous combat commitment of the British Army since World War II. Together with Operation 'Telic' in Iraq, which immediately preceded and overlapped with it, this conflict has shaped the British Army for a generation. Enemy threats have diversified and evolved, with a consequent evolution of British doctrine, tactics and equipment. This book provides a detailed analysis of those specifics within a clear, connected account of the course of the war in Helmand, operation by operation.

I've written this book to help you – the soldier – kill the enemy when you get the chance and, most importantly, come back home in one piece. To achieve this aim I've covered combat training from boot camp up to the level required of a Special Forces soldier. And then gone on to add a few tricks of my own. I've done a bit of soldiering (Northern Ireland, SAS deployments, Bush Wars in Africa, life as a merc) and been in my fair share of fire-fights. I've only been wounded twice and learnt from both occasions. I'm going to use my experience to teach you to play the game. I'm not going to teach you how to survive in snowy mountains for a month with only one tea-bag or how to kill a room full of people with only a toothpick. There are plenty of books that do that already. This book will teach you how to fight and survive war in the 21st century from the tools of the trade, to avoiding getting shot or blown-up, from surviving an interrogation to defending a position. This is a book not for the faint hearted. But then neither is war.

The third century AD was a turbulent and testing time for the Roman Empire. A new and powerful foe in the east had risen up to challenge Rome directly. Barbarians on the northern frontiers were now more aggressive and more numerous than before and internally the population of the empire had to contend with rampant inflation and a series of terrible plagues. Unfortunately, the chaos became magnified by a lack of continuity on the imperial throne. The army had real political power in the third century, making and unmaking emperors as it saw fit. It had been aided in this by Septimius Severus, the African emperor who had won out in the civil wars following Commodus' assassination. He increased the army's pay and granted other privileges. While the army gained rapidly in size, stature and political savvy during the reign of Septimius Severus, it also accelerated a material transformation. Armour, shields, helmets, swords and javelins all began to be replaced with new styles. Legions in Crisis looks closely at the new styles of arms and armour, comparing their construction, use and effectiveness to the more familiar types of Roman kit used by soldiers fighting the earlier Dacian and Marcomannic Wars. What did this transformation in military technology mean for the tactical choices used on the battlefield? Although the outcome had looked in doubt, the army and the empire it protected weathered the storm to emerge into the fourth century fully able to tackle the challenges of a new age.

In the past decade and a half the unique requirements of dual wars in Iraq and Afghanistan have radically altered the appearance and capabilities of the British Army's infantry soldiers. Gone are the tactics uniforms and equipment of the Cold War, replaced by an elite fighting force, skilled in counterinsurgency operations and warfare in both urban and rural environments. Fully illustrated and written by an insider, this engaging book traces the major transformations in British Army doctrine, organisation, structures, units, uniforms and equipment, from the end of the Cold War in the 1990s up to today, revealing how despite being a small force in global terms, the British Army continues to be able to punch above its weight.

This book aims to help clinicians who seek to conduct science and engineering based research on blast injuries as well as engineers and scientists who seek to apply their expertise to address blast injuries. Blast injuries are prevalent. While the current conflict in Afghanistan is reaching its final stages, the legacy of landmines will sadly ensure that injuries and fatalities will continue to occur. The understanding of these injuries and the science behind their mitigation and treatment is a multi-disciplinary effort. Current knowledge has rapidly grown due to recent conflicts, yet the learning has not yet been captured in any formal way.

Many, if not most, of the recent improvements in trauma care in civilian practice have developed from military experience. The British Defence Medical Services have been recognised as providers of exemplary health care. Although there will is an emphasis on trauma, this book also captures lessons from internal medicine and infectious disease, ethics (for example dealing with detainees – a particularly controversial subject), human factors, mental health issues and rehabilitation.Military Medicine provides the evidence and context for these innovations, and its unique and important account will be of interest to both military and civilian practitioners alike.

Military Injury Biomechanics: The Cause and Prevention of Impact Injuries is a reference manual where information and data from a large number of sources, focussing on injuries related to military events, has been critically reviewed and discussed. The book covers the cause and prevention of impact injuries to all the major body regions, while topics such as the historical background of military impact biomechanics, the history and use of anthropomorphic test devices for military applications and the medical management of injuries are also discussed. An international team of experts have been brought together to examine and review the topics. The book is intended for researchers, postgraduate students and others working or studying defence and impact injuries.

Protective clothing protects wearers from hostile environments, including extremes of heat and cold. Whilst some types of protective clothing may be designed primarily for non-thermal hazards (e.g. biological hazards), a key challenge in all protective clothing remains wearer comfort and the management of thermal stress (i.e. excessive heat or cold). This book reviews key types of protective clothing, technologies for heating and cooling and, finally, modeling aspects of thermal stress and strain. Explores different types of protective clothing, their uses and their requirements, with an emphasis on full-scale or prototype clothing, including immersion suits, body armour and space suits Considers novel and commercial technologies for regulating temperature in protective clothing, including phase change materials, shape memory alloys, electrically heated clothing and air and water perfusion-based cooling systems Reviews the human thermoregulatory system and the methods of modelling of thermal stress in protective clothing through various conditions, including cold water survival and firefighting

Lightweight Ballistic Composites: Military and Law-Enforcement Applications, Second Edition, is a fully revised and updated version of this informative book that explores the many changes in composite materials technology that have occurred since the book's first release in 2008, especially the type of commercial products used by armed forces around the world. Some changes can be attributed to the wars in Iraq and Afghanistan, whereas others are due to massive investment by private companies to neutralize the ever-increasing global threats and fulfill the military's appetite for lighter materials. Soldiers are now better protected against new ballistic threats and the overall weight of body protection has been reduced, while comfort has increased. New military vehicles are no longer purely armored with steel, and are instead lined with lightweight ballistic materials that increase the distance military vehicles can travel without refueling and also improve maneuverability. The book considers all aspects of lightweight ballistic composites from fiber manufacturing to commercial products and testing. Chapters also cover the many uses of lightweight ballistic composites in the military and law-enforcement industries. It will be an invaluable reference for ballistic composite design engineers, product development engineers, and all those involved in promoting new products for both defense and the law-enforcement industry. Gives comprehensive coverage on all aspects of lightweight ballistic composites, from fiber manufacturing, to commercial products and testing Discusses the wider applications of lightweight ballistic composites in military and law-enforcement industries Edited by a highly respected industry expert with over thirty years' experience developing lightweight composite ballistic materials and products

Exposing the true scale and significance of the deployment of air power in the Balkans, this book details the activities of NATO and UN aircraft as well as local pilots in the former Yugoslavia. From bombing by B-2 stealth bombers to air-to-air combat; from moving ground troops by helicopter to 'food-bombing' for refugees, air power has played a vital role in 'Europe's Vietnam', and there is little sign that the fires of conflict are being extinguished. Debate amongst air power practitioners has yielded little agreement as to the degree of damage inflicted on the Yugoslav 3rd Army in Kosovo, the Balkans continue to be a region of conflict and ethnic hatred.
