Reducing your carbon emissions in an economic down-turn can be challenging, but saving the planet doesn't have to cost you more. Tough economic times need not relegate concerns for the planet to the back burner. The author is an environmental economist trying to live a low-carbon life in London. He worked for 15 years in the UK's Office of Climate Change, the Prime Minister's Strategy Unit and the Department of the Environment. So far so good. But he has kids. A family to visit in India. A hectic job. In distilling and building on his own experience of trying to live a low carbon life, he helps us navigate the choices that confront us all - families, singletons, pensioners - when making decisions about what to eat, what to buy, how to travel and how to keep warm in the era of climate change and economic turmoil. He works out the sums and lets us know which choices will make the biggest difference, and which are false savings. His book is an irreverent but seriously rigorous reference guide to low-cost, low-carbon living for everyone - in any location - in tough times. It's brimming with up-to-date information on current and future technologies, tips and ideas for every budget on how to spend the least for the biggest carbon reduction gain and insight from the experiences of people trying to live low-carbon lives.

This is one in a series of manuals for car or motorcycle owners. Each book provides information on routine maintenance and servicing, with tasks described and photographed in a step-by-step sequence so that even a novice can do the work.

Multimedia Journalism: A Practical Guide offers clear advice on working across multiple media platforms and includes guides to creating and using video, audio, text and pictures. It contains all the essentials of good practice and is supported by

Download File PDF Peugeot 307 Petrol And Diesel Owners Workshop Manual 2001 To 2008 Haynes Service And Repair

an Companion Website at www.multimedia-journalism.co.uk which demonstrates how to apply the skills covered in the book, gives examples of good and bad practice, and keeps the material up-to-date and in line with new hardware, software, methods of working and legislation. The book is fully cross-referenced and interlinked with the website, which offers the chance to test your learning and send in questions for industry experts to answer in their masterclasses. Split into three levels – getting started, building proficiency and professional standards – this book builds on the knowledge attained in each part, and ensures that skills are introduced one step at a time until professional competency is achieved. This three stage structure means it can be used from initial to advanced level to learn the key skill areas of video, audio, text, and pictures and how to combine them to create multimedia packages. Skills covered include: writing news reports, features, email bulletins and blogs building a website using a content management system measuring the success of your website or blog shooting, cropping, editing and captioning pictures recording, editing and publishing audio reports and podcasts shooting, editing and streaming video and creating effective packages creating breaking news tickers and using Twitter using and encouraging user generated content interviewing and conducting advanced online research subediting, proofreading and headlining, including search engine optimisation geo-tagging, geo-coding and geo-broadcasting. Website access is free when the book or ebook is purchased. The registration key is on the final page of all editions of the book and ebook and is also on the inside front cover of the paperback edition.

Industrial Applications of Batteries looks at both the applications and the batteries and covers the relevant scientific and technological features. Presenting large batteries for stationary applications, e.g. energy storage, and also batteries for hybrid vehicles or different tools. The important aerospace field is covered both in connection with satellites and space missions. Examples of applications include, telecommunications, uninterruptible power supplies, systems for safety/alarms, car accessories, toll collection, asset tracking systems, medical equipment, and oil drilling. The first chapter on applications deals with electric and hybrid vehicles. Four chapters are devoted to stationary applications, i.e. energy storage (from the electric grid or solar/wind energy), load levelling, telecommunications, uninterruptible power supplies, back-up for safety/alarms. Battery management by intelligent systems and prediction of battery life are dealt with in a dedicated chapter. The topic of used battery collection and recycling, with the description of specific treatments for the different systems, is also extensively treated in view of its environmental relevance. Finally, the world market of these batteries is presented, with detailed figures for the various applications. * Updated and full overview of the power sources for industries * Written by leading scientists in their fields * Well balanced in terms of scientific and technical information
