In its 100 pages, this book contains 49 of the most beautiful coloring pages for a relaxed and joyful coloring time. What makes this book a truly adorable must have ? The unique and extremely easy manner - of navigating to the page of your choice. For this, just turn to the back cover - choose from among the thumbnail images - follow the light/dark gray strip, moving from the thumbnail to the trim edge - then slightly curl the book (back cover convex), thereby skewing the trim edge, and thereby revealing the corresponding light/dark gray strips on the pages inside - then open the book at the corresponding page - VOILA - and you would find it gets extremely easy and intuitive over time. 49 truly unique and relaxing artworks, to help you color away your stress. It consists of 100 pages - neither too flimsy to justify the cost, not too thick to fall apart at the binding when coloring. A large format of 8.5 X 11 inches. All artworks on only one side of the page, to prevent wastage of adjacent artworks - if you choose to frame one.

Covers all of Photoshop's channel-related features and functionality, including an improved Histogram palette that displays channels in color with a dynamic view of how filters, levels, curves, and other settings will affect tonal range and bit depth.

Last year we launched Volume 1 of the Reviews in Fluorescence series. The volume was well-received by the fluorescence community, with many e-mails and letters providing valuable feedback, we subsequently thank you all for your continued support. After the volume was published we were most pleased to learn that the volume is to be citable and indexed, appearing on the ISI database. Subsequently, as well as the series having an impact number in due course, individual chapters will appear on the database and be both citable and keyword searchable. We feel that this will be a powerful resource to both authors and readers, further disseminating leading-edge fluorescence based material. Our intention with this new series is to both disseminate and archive the most recent developments in both past and emerging fluorescence based disciplines. While all chapters are invited, we welcome and indeed encourage the fluorescence community to suggest areas of interest that they feel need to be covered by the series. In this new volume. Reviews in Fluorescence 2005, Volume 2, we have invited reviews in areas such as: Multi-dimensional Time-correlated Single Photon Counting; Fluorescence Correlation Spectroscopy; RNA folding; Lanthanide Probes and Fluorescent Biosensors to name but just a few. We hope you find this volume a useful resource and we look forward to receiving any suggestions you may have. Finally we would like to thank the authors for their timely articles, Caroleann Aitken for the fi-ont cover design, Kadir Asian for typesetting and Mary Rosenfeld for administrative support.
