This book presents a selection of tried and trusted laboratory experiments in the field of biochemistry. The experiments are described in detail and can be used directly or in a modified form. They are grouped according to a broad range of biochemical disciplines which allows those responsible for arranging practical classes to select experiments to complement any given biochemistry course. Suggestions are made for further work in more advanced classes. As well as the practical method the experiments are accompanied by background information, discussion of results, references for further study and illustrations.

Based on BHMS syllabus by CCH. This book deals with the basic knowledge of practical biochemistry but also its application in actual clinical practice. Creates an abiding interest in the practical aspects of the subject.

author establishes a thorough understanding of the foundations of and common linkages between molecular structures and reactions, so that eventual interpretation of complex biochemical pathways and reactions is easy. All of the major molecular structures and biochemical pathways are explained, and, for the most part, these center on mammalian biochemistry. The text is supported by biochemical nomenclature and questions to bear in mind while reading. Higher learning sections are also provided for advanced students. Written in an informal, conversational style, this textbook will serve as an invaluable resource for any student who is struggling with the standard texts and for postgraduate students who need to refresh their knowledge.
