Fruit Oils: Chemistry and Functionality presents a comprehensive overview of recent advances in the chemistry and functionality of lipid bioactive phytochemicals found in fruit oils. The chapters in this text examine the composition, physicochemical characteristics and organoleptic attributes of each of the major fruit oils. The nutritional quality, oxidative stability, and potential food and non-food applications of these oils are also extensively covered. The potential health benefits of the bioactive lipids found in these fruit oils are also a focus of this text. For each oil presented, the levels of omega-9, omega-6 and omega-3 fatty acids are specified, indicating the level of health-promoting traits exhibited in each. The oils and fats extracted from fruits generally differ from one another both in terms of their major and minor bioactive constituents. The methods

used to extract oils and fats as well as the processing techniques such as refining, bleaching and deodorization affect their major and minor constituents. In addition, different post-processing treatments of fruit oils and fats may alter or degrade important bioactive constituents. Treatments such as heating, frying, cooking and storage and major constituents such as sterols and tocopherols are extensively covered in this text. Although there have been reference works published on the composition and biological properties of lipids from oilseeds, there is currently no book focused on the composition and functionality of fruit oils. *Fruit Oils: Chemistry and Functionality* aims to fill this gap for researchers, presenting a detailed overview of the chemical makeup and functionality of all the important fruit oils.

Conservation Biology for All provides cutting-edge but basic conservation science to a global readership. A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting-edge conservation knowledge as widely as possible. Important topics such as balancing conversion and human needs, climate change, conservation planning, designing and analyzing conservation research, ecosystem services, endangered species management, extinctions, fire, habitat loss, and invasive species are covered. Numerous textboxes describing additional relevant material or case studies are also included. The global biodiversity crisis is now unstoppable; what can be saved in the developing world will require an educated constituency in both the developing and developed world. Habitat loss is particularly acute in developing countries,

which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found. Sadly, developing world conservation scientists have found it difficult to access an authoritative textbook, which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest. There is now an urgent need to educate the next generation of scientists in developing countries, so that they are in a better position to protect their natural resources.

The main body of the document deals with the nutritional composition and usage of major feed ingredient sources in compound aquafeeds, as well as the use of fertilizers and manures in aquaculture operations.

There is no peace with hunger. Only promises and promises and no fulfillment. If there is no job, there is no peace. If there is nothing to cook in the pot, there is no peace. - Oscar, a 57-year-old man, El Gorri n, Colombia They want to construct their houses near the road, and they cannot do that if they do not have peace with their enemies. So peace and the road have developed a symbiotic relation. One cannot live without the other. . . . - A community leader from a conflict-affected community on the island of Mindanao, Philippines Most conflict studies focus on the national level, but this volume focuses on the community level. It explores how communities experience and recover from violent conflict, and the surprising opportunities that can emerge for poor people to move out of poverty in these harsh contexts. 'Rising from the Ashes

of Conflict' reveals how poor people s mobility is shaped by local democracy, people s associations, aid strategies, and the local economic environment in over 100 communities in seven conflict-affected countries, including Afghanistan. The findings suggest the need to rethink postconflict development assistance. This is the fourth volume in a series derived from the Moving Out of Poverty study, which explores mobility from the perspectives of poor people in more than 500 communities across 15 countries.

Mothers and Others finds the key in the primatologically unique length of human childhood. Renowned anthropologist Sarah Hrdy argues that if human babies were to survive in a world of scarce resources, they would need to be cared for, not only by their mothers but also by siblings, aunts, fathers, friends—and, with any

luck, grandmothers. Out of this complicated and contingent form of childrearing, Hrdy argues, came the human capacity for understanding others. In essence, mothers and others teach us who will care, and who will not.

The health of scientific enterprise has become a critical political and social issue as nation states tackle austerity, diversity, global challenges, whilst simultaneously supporting a competitive and innovative national economy. A key asset in achieving such ambitions is for a scholarly information system which enables the fruits of the research effort to be disseminated efficiently. As the information support system struggles with adapting from a print-based to a digital process, the dysfunctionality current within STEM publishing in particular becomes evident. New ways of supporting

research are emerging which require a new approach to publishing, an approach which takes on board the many demographic, social, technical and administrative changes taking place in both science itself and society. A radical strategic assessment is required and this book tracks key aspects required for any new future strategy. This book provides a catalogue of issues to which a future STEM information industry will need to adapt. They range from the effects of technology on the neurological processes of research to the growing use of technology to speed up the exchange of information among groups and collaboratories; from considerations about quality control yet maintaining intellectual ownership; from changing from an elitist STEM system favouring academics to a more democratic process with wider appeal. There is the neglected non-academic market and its need to share in the results of the

research effort, often through partnership and being part of a ‘hive mind’. This is the large world of the unaffiliated knowledge workers, of which academia is numerically but a small part. The many changes taking place in scholarly information dictate that the future is unlikely to be a smooth and gradual evolution from the past. Radical new approaches are required, a revolution which takes on board the perfect storm of changes listed in this book. Just as such changes have changed the face of industries such as music and retail in recent years, so similar dramatic changes are likely to result in a restructuring of STEM into a more technologically-focused industry within the next decade. The implications for the current STEM stakeholders are profound.

third graders in an English/Spanish bilingual program was conducted during the 1980-81 school year. Samples of the children's writing were collected at four intervals, coded for computer tallying, and analyzed in terms of code-switching, spelling, punctuation and segmentation, structural features, stylistic devices, and content. Additionally, the context in which the writing developed was evaluated by classroom observations, teacher interviews, review of familial backgrounds, and a survey of the community language situation. Myths about bilingual language proficiency, biliteracy, bilingual education, teaching writing, and learning to write are all countered by evidence presented in this study. In a discussion of implications, the concept of a whole language approach to writing instruction is supported, in which authentic and functional texts are offered to and produced by

children. Examples of the children's writing with appropriate translations are given along with various tables. Informal follow-up information is presented in three epilogues dealing with changes in the researcher's commitment to the study's original writing theories, the writing of some students a year after the study; and a chronological outline of the demise of the bilingual program used in the study. Appendices list interview questions used for teachers and aides and categories for coding the writing data. This book contains 134 references. (ALL)

Why is there so little industry in Africa? Over the past forty years, industry has moved from the developed to the developing world, yet Africa's share of global manufacturing has fallen from about 3 percent in 1970 to less than 2 percent in 2014. Industry is important

to low-income countries. It is good for economic growth, job creation, and poverty reduction. *Made in Africa: Learning to Compete in Industry* outlines a new strategy to help African industry compete in global markets. This book draws on case studies and econometric and qualitative research from Africa and emerging Asia to understand what drives firm-level competitiveness in low-income countries. The results show that while traditional concerns such as infrastructure, skills, and the regulatory environment are important, they alone will not be sufficient for Africa to industrialize. The book also addresses how industrialization strategies will need to adapt to the region's growing resource abundance.
