Finding ways to reduce prejudice and discrimination is the central issue in attacking racism in our society. Yet this book is almost unique among scientific volumes in its focus on that goal. This important book combines critical analysis of theories about how to reduce prejudice and discrimination with cutting-edge empirical research conducted in real-world settings, as well as in controlled laboratory situations. This book's outstanding contributors focus on a common set of questions about ways to reduce intergroup conflict, prejudice, and stereotyping. They summarize their own research, as well as others, interpret the conclusions, and suggest implications concerning the practical methods that have been, or could be, used in programs aimed at reducing intergroup conflict. The chapters present solidly based critical analyses and research findings in clear, reader-friendly prose. This book evolved from the Sixteenth Annual Claremont Symposium on Applied Social Psychology. Each Symposium in the series concentrates on a single area in which social psychological knowledge is being applied to the resolution of a current social problem. Ideal for teachers, social workers, administrators, managers, and other social practitioners who are concerned about prejudice and discrimination, this book will also serve as a valuable foundation of knowledge in courses that examine this topic.

"Given the weaponization of cultural and ideological differences in politics, education, and social media today, the need to understand and fight prejudice is urgent. This second edition of Lynne Jackson's seminal text presents a significantly updated review of the psychological underpinnings of prejudicial thoughts and behaviors. Jackson synthesizes new research from various areas of psychology to analyze contemporary examples of prejudice, including anti-immigrant policies, police violence against minorities, anti-woman and LGBTQ backlash, and ageist cultural biases. She also explores frequently overlooked issues related to prejudice, such as environmental inequality and speciesism. Drawing from literature in evolutionary, developmental, social, and personality psychology, Jackson explores the biological and environmental roots of prejudice, including how people develop essentialist views in childhood and learn to favor ingroup members and dehumanize outgroup members. She draws connections between these beliefs and other social justice issues showing how they give rise to greater social problems like inequality and political polarization. She also offers readers a blueprint for overcoming these deeply embedded biases by improving intergroup attitudes and building communities to create progressive social change"--
