This book summarizes Ismael Apud ’ s ethnographic research in the field of ayahuasca, conducted in Latin America and Catalonia over a period of 10 years. To analyze the variety of ayahuasca spiritual practices and beliefs, the author combines different approaches, including medical anthropology, cognitive science of religion, history of science, and religious studies. Ismael Apud is a psychologist and anthropologist from Uruguay, with a PhD in Anthropology at Universitat Rovira i Virgili.

Transactions Of A Conference On D-Lysergic Acid Diethylamide, LSD-25, April 22, 23, And 24, 1959, Princeton, New Jersey. Additional Contributors Include C. H. Van Rhijn, Henry L. Lennard, And Mollie P. Hewitt.

This book covers the psychedelic ayahuasca tourism in Peru, with its facet-rich psychological, pharmacological, anthropological, and sociological aspects. The reader gets an interdisciplinary insight into the historical development and the current state of ayahuasca research. Findings from three empirical studies are presented, which the author has won in a 4-year field research: How do common standards develop in this particular form of psycho-spiritual tourism? Why are people from developed nations and urban centres heading to the Amazon to ingest the psychedelic beverage Ayahuasca? How do they experience such ceremonies and retreats? Which insights, personal meaning and effects do they gain and how do they integrate their experiences into the everyday life?

Unlike most theories of the human self that are generally based on conjecture, this book describes a new scientific theory of the human self and its states of consciousness. This theory is formulated using the revealed knowledge found in the Holy Scriptures along with the principles of physics. In a quest for the ultimate truth, the book attempts to understand the relationship between man and his Creator. Dr. Naqvi describes the universal principle of complementarity of creation that shows that the world of matter is not mutually exclusive to the spirit world, but both are complementary to each other. The three major holy scriptures of monotheistic faith describe the human spirit as a breath from the spirit of God. It is termed divine spark in man. The book explains that the divine spark is a seed of divine attributes of truth, goodness, compassion, and justice. A major outcome of this notion is that all humans are equal members of the family of God, irrespective of race, color, or creed and deserving mutual respect and compassion. Questions are answered about the origin of human spirit, purpose of human creation, spirit-matter interaction, and the basis of ethics. Findings of prominent neurosurgeons show that the spirit (soul) is an autonomous entity that can exist without a physical vehicle, which takes the inquisitive reader into a mind-blowing conclusion. This book is a response to the growing need among academics and thinking masses for scientific explanations of spirituality, psychology, philosophy, mysticism, religion, and paranormal phenomena. Over the past twenty-five years, the author has presented the theory in various universities in psychology and theology departments globally. This book may serve as course material for university-level psychology, philosophy, and theology departments. In brief, the unique theory presented in this book can be described as the science of spirituality.

For the past one hundred years, psychotherapy has neglected the inner world of image in favor of words. Now, Dr. Gerald Epstein presents the next evolution in therapy -- Waking Dream.Epstein’s approach is brief, effective and powerful. Waking Dream Therapy uses mental imagery to journey inward. The explorer starts from a waking state and via imagination, reenters a night dream fragment to explore the dream. This inner journey reveals new directions and jolts the person to change. The book also contains a history of imagination; instructions for the process; examples of waking dreams; and the meaning of symbols. It appeals both to clinicians and to anyone who seeks self-transformation.

"Karl Jansen's book Ketamine, Dreams, and Realities is a goldmine of information on this fascinating substance that combines in a unique way the properties of an anesthetic and a psychedelic. It is clearly written, well researched and documented, and presents a balanced and objective view point. The author's broad perspective that covers all the aspects of Ketamine from pharmacology to its use in raves makes this book interesting for clinicians and researchers, as well as the general public."- Stan Grof, M.D., author of Psychology of the Future: Lessons From Modern Consciousness Research; LSD Psychotherapy "Indispensable reading for those with any interest in ketamine. Entertaining, thought-provoking, and thorough." - Rick Strassman, M.D., author of DMT: The Spirit Molecule: A Doctor's Revolutionary Research into the Biology of Near-Death and Mystical Experiences "It is an excellent book... a well done comprehensive review of the entire history of ketamine." - Evgeny Krupitsky, M.D., Ph.D. Pioneer researcher into the use of ketamine-assisted psychotherapy in the treatment of alcoholism and heroin addiction.

Research in Analytical Psychology: Applications from Scientific, Historical, and Cross-Cultural Research is a unique collection of chapters from an international selection of contributors, reflecting the contemporary field of research in Analytical Psychology with a focus on qualitative and mixed-methods research. Presented in seven parts, this volume offers unique qualitative research that highlights approaches to understanding the psyche and investigating its components, and offers a Jungian perspective on cultural forces affecting individual psychology. The book brings forward the connections between Analytical Psychology and other disciplines including neuroscience, psychotherapy research, developmental research, Freudian psychoanalysis, and cultural studies. Part I provides an introduction to the volume, establishes the nature of qualitative and interdisciplinary research and its applications for research in other fields, and outlines the presented work. Part II, Approaching Qualitative Research in Analytical Psychology, examines postmodernism and the value a Jungian perspective offers, and introduces Jung ' s correspondence as an emerging resource. Part III, Research on Symbolic Aspects of the Psyche, looks at archetypal theory and cultural complex theory. Part IV, Research on Consciousness and Emotion, presents chapters on meditation and the spectrums of emotion in mythologies, philosophy, Analytical Psychology, and the neurosciences. Part V, A Complex Systems Approach to the Psyche, addresses research on synchronicity, the geometry of individuation, and complexity, ecology, and symbolism. Part VI, Cross-Cultural Research, contains chapters concerning transcendence, psychosocial transformation, psychological infrastructure, and cultural complexes and cultural identity. Part VII concludes the volume by setting directions for potential areas of future study and collaboration. Each chapter provides an overview of research in a specific area and closes with potential directions for future investigation. The book will enable practitioners and researchers to evaluate the empirical status of their concepts and methods and, where possible, set new directions. It also presents the significance of contemporary Analytical Psychology and offers opportunities for cross-discipline collaboration and fertilization. This book will be essential reading for analytical psychologists in practice and in training, academics and students of Analytical Psychology and post-Jungian ideas, and academics and students of other disciplines seeking to integrate methods from Analytical Psychology into their research. It is complemented by its companion volume, Research in Analytical Psychology: Empirical Research.
