Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process. Ming, James E. Goddard Space Flight Center

This is volume three in a four-volume edition of primary source materials that document the histories of design across the long nineteenth century. Each volume is arranged by appropriate sub-themes and it is the first set of primary sources to be gathered together in this comprehensive and accessible format. Design refers to more than simply products and personalities or even cultural ideas, it involves consideration of ways of design thinking and applications as well as the philosophies and the other disciplines that impinge upon it. Here, the third volume considers the issues of design production and practices including debates about the role of machine and craft, the impact of new materials and technologies as well as issues of marketing and mediation. The volumes will be of interest to a range of scholars and students, including those in art and design history, visual culture, and nineteenth-century material culture. They will also be of interest to a broad range of scholars working in areas including aesthetics, gender, politics and philosophy.

Singapore's leading tech magazine gives its readers the power to decide with its informative articles and in-depth reviews.

Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.
