trains and the external emission of high-speed trains in the frequency range of 9 kHz ~ 1 GHz. Electric locomotives, intercity and urban rail EMUs can be implemented with reference to this standard.

This manual describes applications of the multiconductor transmission-line computer program, NLINE. The program computes the voltages and currents induced by an incident plane electromagnetic wave on the conductors or in the loads of a lossless transmission line made up of 11 conductors or less. The solution is provided both in the frequency and time domains. The program accepts arbitrary angles of incidence, transmission-line length, and
