How do development and use of new technology relate? How can users contribute to innovation? This volume is the first to study these questions by following particular technologies over several product launches in detail. It examines the emergence of inventive ideas about future technology and uses, how these are developed into products and embedded in health care practices, and how the form and impact of these technologies then evolves through several rounds of design and deployment across different types of organizations. Examining these processes through three case studies of health care innovations, these studies reveal a blind spot in extant research on development-use relations. The majority of studies have examined shorter ' episodes ' : moments within particular design projects, implementation processes, usability evaluations, and human-machine interactions. Studies with longer time-frames have resorted to a relatively coarse ' grain-size ' of analysis and hence lost sight of how the interchange is actually done. As a result there are no social science, information systems, or management texts which comprehensively or adequately address: • how different moments, sites and modes of shaping new technology determine the evolution of new technology; • the detailed mechanisms of learning, interaction, and domination between different actors and technology during these drawn out processes; and • the relationship of technology projects and the professional practices and social imaginations that are associated in technology development, evaluation, and usage. The "biographies of technologies and practices" approach to new technology advanced in this volume offers us urgent new insight to core empirical and theoretical questions about how and where development projects gain their representations of future use and users, how usage is actually designed, how users ' requests and modifications affect designs, and what kind of learning takes place between developers and users in different phases of innovation—all crucial to our understanding and ability to advance new health technology, and innovation more generally.

This up-to-date quick reference guides the reader through the most popular SAP module. It includes material on SAP ERP Financials, SAP FICO, and SAP R/3. Unlike most books that only provide questions and answers for certification or interview preparation, this book covers fifty common business situations related to ERP Financials/FICO and provides practical solutions for them. In addition, the book begins with over 200 FAQs and certification questions for those who need a quick review of the material. A CD-ROM with FICO templates, short cuts, and color figures from the book is included with the text.

Implementing SAP R/3: The Guide for Business and Technology Managers provides a framework and a complete plan that enables business and technical managers to take the optimal decisions that are necessary for the successful implementation of SAP in their organizations. It presents the details needed to plan and present confidently a case for choosing SAP, without ever asking the software vendor or involving the vendor's personnel.

SAP ERP modules are notoriously hard to configure and use effectively without a lot of practice and experience. But as SAP ERP Financial Accounting and Controlling: Configuration and Use Management shows, it doesn't have to be so difficult. The book takes a systematic approach that leads SAP Financial Accounting and Controlling (FICO) users step by step through configuring and using all the program's facets. This approach makes configuration complexities manageable. The book's author—SAP expert, trainer, and accountant Andrew Okungbowa—ensures that both you and your end users are up and running quickly and confidently with FICO. He also provides sound and tested procedures that ensure your implementation works without error. SAP ERP Financial Accounting and Controlling: Configuration and Use Management is in fact the most comprehensive and easy-to-follow SAP FICO configuration book in the market. It incorporates a hands-on approach, with hundreds of screen shots and practical examples, that allows a person without prior configuration training to make SAP FICO ready for use in the enterprise. You'll find that you don't need to be a rocket scientist to grasp the concepts explained and apply them to your work—even when the finances are complicated, such as with the ins and outs of taxes, currency conversions, or special general ledger entries such as down payments or bills of exchange. Providing an in-depth coverage of both configuration and end user procedures, the book covers most aspects of the SAP FICO certification syllabus—SAP's view of the module's key tasks and procedures—including: Configuring and using the general ledger and accounts payable and receivable screens Configuring and completing closing procedures, asset accounting, and financial reporting Configuring global settings and enterprise variables Accounting for both profit and cost centers Creating a house bank Integrating FICO with other SAP modules Taking a jargon-free tone and providing an abundance of examples, Andrew Okungbowa provides a clear understanding of configuration techniques and the breadth of functionalities encompassed by SAP FICO. And as an accountant, Okungbowa understands the needs of end users as well as of those answering to the CIO.
