"Why are some countries rich and others poor? Shaping the Developing World addresses the fundamental question of what 'development' actually is and examines social, political, and economic developments around the world. Andy Baker adeptly uses a threefold framework of the global North, the global South, and the Natural World to categorize and analyze the factors that cause underdevelopment—from the consequences of colonialism, deficient domestic institutions, and gender inequality to the effects of globalization, geography, and environmental degradation. This book is an introduction to the contested field of development and relevant to students studying geography, sociology, political science, economics, gender studies, and anthropology. The Second Edition has been updated to incorporate new research on topics like religion, democracy, informality, geography and development, and climate change. Issues of gender has been incorporated throughout the book"—

Why are some countries rich and others poor? Colonialism, globalization, bad government, gender inequality, geography, and environmental degradation are just some of the potential answers to this complex question. Using a threefold framework of the West, the South, and the natural world, Shaping the Developing World provides a logical and intuitive structure for categorizing and evaluating the causes of underdevelopment. This interdisciplinary book also describes the social, political, and economic aspects of development and is relevant to students in political science, international studies, geography, sociology, economics, gender studies, and anthropology. The Second Edition has been updated to include the most recent development statistics and to incorporate new research on topics like climate change, democratization, religion and prosperity, the resource curse, and more. This second edition also contains expanded discussions of gender, financial inclusion, crime and police killings, and the Middle East, including the Syrian Civil War.

Why are some countries rich and others poor? Shaping the Developing World explores the different theories that attempt to answer this thorny question. Interdisciplinary in his scope, Andy Baker adeptly uses a threefold framework of the West, the South, and the Natural World to categorize and analyze the factors that cause underdevelopment—from the consequences of colonialism, deficient domestic institutions, and gender inequality to the effects of globalization, geography, and environmental degradation. Students learn to think like social scientists while coming to understand the full breadth of influences on a nation's political, economic, and social development. Country case studies at the end of each chapter offer an ideal testing ground for the threefold framework, as they apply empirical data to the various explanations of underdevelopment. Critical thinking questions then encourage students to weigh the different theoretical arguments. A series of well-designed features develop students' understanding of indicators of development concepts and highlight various kinds of aid organizations and opportunities for development work in the field. Shaping the Developing World presents high-quality academic analysis and the latest scholarship in a format that's engaging, informative, and above all, accessible.

An analysis of the elevated level of contemporary global economic inequality—its measurement, trends over time and geography, and the policy challenges thrown up by them, with a focus on mainly five countries—Brazil, China, India, South Africa, and Mexico.

Governments fail to provide the public goods needed for development when its leaders knowingly and deliberately ignore sound technical advice or are unable to follow it, despite the best of intentions, because of political constraints. This report focuses on two forces—citizen engagement and transparency—that hold the key to solving government failures by shaping how political markets function. Citizens are not only queuing at voting booths, but are also taking to the streets and using diverse media to pressure, sanction and select the leaders who wield power within government, including by entering as contenders for leadership. This political engagement can function in highly nuanced ways within the same formal institutional context and across the political spectrum, from autocracies to democracies. Unhealthy political engagement, when leaders are selected and sanctioned on the basis of their provision of private benefits rather than public goods, gives rise to government failures. The solutions to these failures lie in fostering healthy political engagement within any institutional context, and not in circumventing or suppressing it. Transparency, which is citizen access to publicly available information about the actions of those in government, and the consequences of these actions, can play a crucial role by nourishing political engagement.

A look at engineering education today? with an eye to tomorrow Engineering education is in flux. While it is increasingly important that engineers be innovative, entrepreneurial, collaborative, and able to work globally, there are virtually no programs that prepare students to meet these new challenges. Shaping Our World: Engineering Education for the 21st Century seeks to fill this void, exploring revolutionary approaches to the current engineering curriculum that will bring it fully up to date and prepare the next generation of would-be engineers for real and lasting professional success. Comprised of fourteen chapters written by respected experts on engineering education, the book is divided into three parts that address the need for change in the way engineering is taught; specific innovations that have been tested, why they matter, and how they can be more broadly instituted; and the implications for further changes. Designed to aid engineering departments in their transition towards new modes of learning and leadership in engineering education, the book describes how to put into practice educational programs that are aligned with upcoming changes, such as those proposed in the NAE's Engineer of 2020 reports. Addressing the need to change engineering education to meet the demands of the 21st century head on, Shaping Our World condenses current discussions, research, and trials regarding new methods into specific, actionable calls for change.

China has always felt vulnerable, and, in the 1990s, it began forming agreements with other nations, eventually culminating in the Belt and Road Initiative. The authors analyze China's engagement with the Developing World.

At the nexus of political science, development studies, and public policy, Developing States, Shaping Citizenship analyzes an overlooked driver of political behavior: citizens' past experience with the government through service provision. Using evidence from Zambia, this book demonstrates that the quality of citizens' interactions with the government through service provision sends them important signals about what they can hope to gain from political action. These interactions influence not only formal political behaviors like voting, but also collective behavior, political engagement, and subversive behaviors like tax evasion. Lack of capacity for service delivery not only undermines economic growth and human development, but also citizens' confidence in the responsiveness of the political system. Absent this confidence, citizens are much less likely to participate in democratic processes, express their preferences, or comply with state revenue collection. Economic development and political development in low-capacity states, Hern argues, are concurrent processes. Erin Accampo Hern draws on original data from an original large-N survey, interviews, Afrobarometer data, and archival materials collected over 12 months in Zambia. The theory underlying this book's framework is that of policy feedback, which argues that policies, once in place, influence the subsequent political participation of the affected population. This theory has predominantly been applied to advanced industrial democracies, and this book is the first explicit effort to adapt the theory to the developing country context.
