12 (20) - 17 = 240 - 17 = 223. 223 is greater than 151, so this guess is too high. Therefore, x is between 10 and 20. Try x = 15: 12 (15) - 17 = 180 - 17 = 163. 163 is a little greater than 151, so this guess is a little too high. Try x = 14: 12 (14) - 17 = 168 - 17 = 151. 151 is correct, so x = 14.

Ten Full-length SAT Math Tests with 540 Problems! Integrated Solutions: Because it can be boring to review math properties for days or weeks before taking practice tests, we have carefully integrated a review of all the math properties you need for the SAT into the solutions to the test problems. If you study hard and master the techniques in this book, your math score will improve-significantly! The SAT cannot be "beaten." But it can be mastered-through hard work, analytical thought, and by training yourself to think like a test writer. Many of the problems in this book are designed to prompt you to think like a test writer. For example, you will find "Duals." These are pairs of similar problems in which only one property is different. They illustrate the process of creating SAT questions. \* If your target is a 700+ score, this is the book!
