Benefits of a Split Air Conditioning System. This kind of air conditioner system has many advantages over traditional A/Cs. One obvious benefit is the quiet performance of a split air conditioner system. The parts of an air conditioner that make the most noise are the compressor and the fan that cools the condenser. In a split system (unlike a window unit), the compressor and fan for the condenser are located outside the room being cooled and therefore the major sources of noise are removed.

The biggest difference between a split air conditioner and a packaged air conditioner is their size. Split air conditioners are typically three times the size of a packaged unit, when you add all of their parts together. That is part of the reason why split air conditioning systems come with two separate pieces – one inside, and one outside.

A ductless, or mini-split, air conditioner is a great solution for people who want to cool one room in their house without having to cool the whole house. It is also a great way to add air conditioning to an older house that is heated by a boiler and radiators without an existing system of forced-air heat ducts. A mini-split does essentially the same job as a window air conditioner, but you can install it on a wall.

This book examines the various quality management systems applied to the construction industry in Hong Kong and other parts of the world. Hong Kong's experience is particularly important because it plays a leading role in construction quality management globally. The text traces the change from quality control (QC) practice in the 1970s and 1980s, to the quality assurance (QA) concept in the 1990s, and finally to the emerging total quality management (TQM) philosophy. All the tools and techniques used in relation to construction quality management are discussed in detail in the 12 chapters.
