A resolution to the vexed problem whether a troubadour's love is erotic or spiritual is offered by Paolo Cherchi through a new reading of Andreas Capellanus' De Amore (written around 1186-1196). He suggests that Andreas, using a rhetorical strategy that creates ambiguity, condemns courtly love because its claim that passion generates virtue is untenable and deceitful. Although Andreas grasped the core of the courtly love 'system,' namely, the relation between passion and ethics, he failed to consider the notion of mezura, that courtly virtue through which troubadours transformed nature into culture, and erotic passion into social discourse. Cherchi offers an innovative interpretation and a close reading of selected poems. He traces the history of Provençal lyric poetry, highlighting some of the significant personalities and movements.

Innovative text focusing on engine design and fluid dynamics, with numerous illustrations and a web-based software tool.

This book examines the dramatic increase in automotive assembly plants in the former Socialist Central European (CE) nations of Czechia, East Germany, Hungary, Poland, and Slovakia from 1989 onwards. Enticed by relatively lower-wage labour and significant government incentives, the world's largest automakers have launched more than 20 passenger car assembly complexes in CE nations, with production accelerating dramatically since 2001. As a result, the annual passenger car production in Western Europe declined by more than 20% between 2001 and 2015, and alternatively in the CEE it increased by nearly 170% during this period. Drawing on case studies of 25 current and former foreign-run assembly plants, the author presents a rare historical account of automotive foreign assembly plants in the CE following this dramatic geographic shift. This book will expand the knowledge of policy-makers in Europe in relation to their pursuits of FDI and will be of great interest to scholars and students of business, economic history, political science, and development.

In December of 1997, the International Monetary Fund announced the largest bailout package in its history, aimed at stabilizing the South Korean economy in response to a credit and currency crisis of the same year. Vicious Circuits examines what it terms "Korea's IMF Cinema," the decade of cinema following that crisis, in order to think through the transformations of global political economy at the end of the American century. It argues that one of the most dominant traits of the cinema that emerged after the worst economic crisis in the history of South Korea was its preoccupation with economic phenomena. As the quintessentially corporate art form—made as much in the boardroom as in the studio—film in this context became an ideal site for thinking through the global political economy in the transitional moment of American decline and Chinese ascension. With an explicit focus on state economic policy, IMF cinema did not just depict the economy; it also was this economy's material embodiment. That is, it both represented economic developments and was itself an important sector in which the same pressures and changes affecting the economy at large were at work. Joseph Jonghyun Jeon's window on Korea provides a peripheral but crucial perspective on the operations of late US hegemony and the contradictions that ultimately corrode it.
