PAKISTAN: Government in Punjab province fixes sugarcane ...

Sugarcane production has also progressively increased from 7 million tons (1948) to more than 60 million tons (2012-13). The dominance of Punjab in sugarcane cultivation in the country is significant. From 1947-2012/13, the province on average accounted for 69 per

Sugarcane and Punjab, Pakistan: Production, Processing and ...

Similarly, sugarcane production increased by 21.18% in Punjab, 0.53% in Sindh, 0.14% in K-P and 9.54% in Balochistan, the meeting was informed. Pakistan produced around 60 million tons sugarcane ...

Sugar mills begin production | The Express Tribune

LAHORE: Punjab cabinet on Tuesday gave ex-post facto approval to fix Rs200 per 40kg as minimum support price of sugarcane, besides approving transportation charges and sugarcane development cess.

Punjab govt fixes sugarcane support price at Rs200 per ...

ISLAMABAD: As Punjab's sugar mills begin sugarcane crushing as notified by the provincial government, there are serious concerns that the production of the commodity would be considerably lower due to the relatively low recovery of sucrose content due to the early start of crushing.

Early start of sugarcane crushing in Punjab: Will it ...

In Pakistan sugarcane is widely planted in Sindh, Punjab and NWFP provinces. The highest sugarcane production was recorded in Punjab with the average yield of 690 mds/acre during the year 2007-08, while the lowest sugarcane yield was recorded for NWFP province with an average yield of 566 mds/acre during the same year.

Snags in Sugarcane Production in Pakistan | Agribusiness ...

The very first sugar mill was established in the Sindh province. Right now in 2020, we have so far 87 sugar mills that have been operating in Pakistan. This sugar industry is the 2nd largest industry that comes after the textile in Pakistan. Sugar Production in 2020/21. : Exact figures have not come. Domestic Consumption in 2020: Figures will ...

Sugar Industry in Pakistan 2020 Production

In Punjab, planting season of sugarcane is from September to October and February to March. Sugarcane takes generally one year to mature therefore called as Eksali. Spacing Row spacing is ranges from 60-120 cm for sub-tropical regions. Sowing Depth Sow the sugarcane at depth of 3-4 cm and cover it with soil. Method of sowing

Sugarcane Crop Farming Punjab | Apni Kheti

In 1988, the area under sugarcane was 878 x 103 hectares which increased to 886 x 103 hectares in 1992 and sugarcane production increased for 36976 x 103 tons in 1988 to 38059 x 103 tons in 1992. Despite expansion in production over years, increase in the productivity per unit of area has been very low in

SUGARCANE is widely planted in Sindh, Punjab and the NWFP. The highest production during 2007-08 was recorded in Punjab with an average yield of 690mds/acre, while the lowest was in NWFP at...

Sugarcane: yield and profitability - DAWN.COM

Pakistan is the 6th largest sugarcane producer in the world. Like other cash crops, sugarcane is one of the most important cash crops of Pakistan and the main; it is the main contributor for sugar production besides paper and board industry. Pakistan is ranked number nine in the world for sugar production.

Top 6 Sugar Mills of Pakistan that will have a thriving ...

PRODUCTION Pakistan grows about 1 million hectares of sugarcane, more than all other cane producing countries except Brazil, China, Cuba, India and Thailand. Cane is also used for non-centrifugal sugars and seed, so that the amount of land harvested for centrifugal sugar each year is only about two-thirds of the total.

Sugarcane crop,village life Punjab - YouTube

LAHORE, Nov 17 (APP): The provincial cabinet, which met under the chair of Punjab Chief Minister Sardar Usman Buzdar at his office on Tuesday, gave ex post facto approval to fix Rs 200 per maund minimum support price of sugarcane along with the approval of transportation charges and sugarcane development cess.

Punjab cabinet approves minimum support price of sugarcane

Sugarcane is the second largest cash crop of Pakistan and is being cultivated on 0.966 million hectares contributing around 3.6 % of Gross domestic production (GDP) (15)

Sugarcane is the most important plant source for sugar and alcohol production and is cultivated in more than 80 countries in tropical and subtropical areas. However, environmental factors negatively influence its yield and jeopardize the prospect to meet the increasing demand for sugar, other sugarcane derived by products and bioethanol. The development of stress tolerant plants is fundamental for the maintenance and increase of crop yields. Biotechnology to Enhance Sugarcane Productivity and Stress Tolerance provides a comprehensive account of both theoretical and practical aspects of sugarcane production. It contains extensive coverage of genome mapping and molecular breeding in sugarcane and presents the status of the elucidation and improvement of plant genomes of economic interest. Through 14 chapters written by eminent scientists with global influence, this book examines various methods for sugarcane improvement through biotechnology. The book focuses on genetic and physical mapping, positioning, cloning, and monitoring of desirable genes using biotechnological approaches for high sugarcane productivity and the development of stress tolerance. Additional information includes the bioengineering of sugarcane, procedures to boost productivity, genetics and assessments for resistance to drought and salinity, genetics for high yields, and various topics of research on sugarcane genetics. It serves as a detailed reference source for cane growers, sugar and sugarcane technologists, students, and professors.

Sugarcane exhibits all the major characteristics of a promising bioenergy crop including high biomass yield, C4 photosynthetic system, perennial nature, and ratooning ability. Being the largest agricultural commodity of the world with respect to total production, sugarcane biomass is abundantly available. Brazil has already become a sugarcane biofuels centered economy while Thailand, Colombia, and South Africa are also significantly exploiting this energy source. Other major cane producers include India, China, Pakistan, Mexico, Australia, Indonesia, and the United States. It has been projected that sugarcane biofuels will be playing extremely important role in world's energy matrix in recent future. This book analyzes the significance, applications, achievements, and future avenues of biofuels and bioenergy production from sugarcane, in top cane growing countries around the globe. Moreover, we also evaluate the

barriers and areas of improvement for targeting efficient, sustainable, and cost-effective biofuels from sugarcane to meet the world's energy needs and combat the climate change.

The sugarcane crop, one of the most important crops commercially grown in about 115 countries of the world, faces a number of problems, such as low cane productivity, biotic and abiotic stresses, high cost of cultivation, postharvest losses, and low sugar recovery. This volume addresses these issues and provides a comprehensive account of the major advancements in sugarcane research. The book is compilation of recent achievements in sugarcane development and cultivation. It covers a number of improvements made in cane and sugar yield using both conventional and new biotechnological approaches by agricultural scientists and researchers. The comprehensive coverage includes sustainable sugarcane cultivation, development, and management of sugarcane production, covering farming and biotechnology, entomology, pathology, breeding, physiology, biotechnology, agronomy, seed production, and more. It also presents research on modern crop production methods in a comprehensive and easily understood manner. With chapters from expert researchers from internationally renowned institutes (primarily in India), the volume presents the latest information from the literature at the international level to make it usable to many agroecological regions of the world. It will be a valuable resource for agronomists, breeders, plant physiologists, farmers, and students of agricultural sciences.

This is the Proceedings of the Eighth International Conference on Management Science and Engineering Management (ICMSEM) held from July 25 to 27, 2014 at Universidade Nova de Lisboa, Lisbon, Portugal and organized by International Society of Management Science and Engineering Management (ISMSEM), Sichuan University (Chengdu, China) and Universidade Nova de Lisboa (Lisbon, Portugal). The goals of the conference are to foster international research collaborations in Management Science and Engineering Management as well as to provide a forum to present current findings. A total number of 138 papers from 14 countries are selected for the proceedings by the conference scientific committee through rigorous referee review. The selected papers in the second volume are focused on Computing and Engineering Management covering areas of Computing Methodology, Project Management, Industrial Engineering and Information Technology.
