6. Teach them how to play by themselves. Along with teaching your children how to play with you; you should also teach them how to play by themselves. This task can be a little daunting, but it doesn't have to be. Since you should already be playing with your child, you just have to take this one step further. It is called "fading proximity".

Similar to step 1 (above), we would teach the child to tolerate playing near peers, also called parallel play. Parallel play remains age-appropriate until about age four when interactive play typically emerges. Tip: Kids love trains? Build one track and have them each drive their own cars around the track. Step 5: Interactive play with peers

### **Teach Through Play – Encourage Play**

Play may consist of amusing, pretend or imaginary, constructive, interpersonal (play with others) or intrapersonal (solitary play) interactions. Play is the way that children learn about the environment, their bodies and their place in the world around them. Social skills are the skills we use everyday to interact and communicate with others. They include verbal and non-verbal communication, such as speech, gesture, facial expression and body language.

## **Teaching skills to children: how to do it | Raising ...**

Children with autism must be specifically taught to engage in social and play activities, and often require direct instruction to learn to play with others. Instruction in play skills is noted in the literature as important for young children with autism, yet little evidence suggests which of several teaching methods is most effective.

Learning occurs in the context of play for young children. Previous research has shown that many young children lack developmentally appropriate play skills. Play interventions have been developed to assist those children who may be lacking play skills. However, there is little research on direct play skill interventions for children who exhibit challenging behaviors. This study examined the effects of a four-week play skill intervention for six children with behavioral needs who attend a mental health day-treatment facility. Three children were in the play skill intervention group and three children in the

Today's parents often worry that their children will be at a disadvantage if they are not engaged in constant learning, but child development expert David Elkind reassures us that imaginative play goes far to prepare children for academic and social success. Through expert analysis of the research and powerful examples, Elkind shows how creative, spontaneous play fosters healthy mental and social development and sets the stage for academic learning in the first place. An important contribution to the literature about how children learn, *The Power of Play* restores play's respected place in children's lives and encourages parents to trust their instincts to stay away from many of the dubious educational products on the market.

One hundred and ten years ago, Maria Montessori, the first female physician in Italy, devised a very different method of educating children, based on her observations of how they naturally learn. In *Montessori*, Angeline Stoll Lillard shows that science has finally caught up with Maria Montessori. Lillard presents the research behind nine insights that are foundations of Montessori education, describing how each of these insights is applied in the Montessori classroom. In reading this book, parents and teachers alike will develop a clear understanding of what happens in a Montessori classroom and, more importantly, why it happens and why it works. Lillard explains the scientific basis for Montessori's system and the distinctions between practices in traditional, "Montessomething," and authentic Montessori education. Furthermore, in this new edition, she presents recent studies showing evidence that this alternative to traditional schooling does indeed make a difference. *Montessori* is indispensable reading for anyone interested in teaching, training, or considering Montessori schooling, in developmental psychology, or in understanding about human learning and education overall.

With this proven approach based on of 20 years of research, educators and therapists will use natural learning opportunities to help children with autism enjoy more positive interactions, more effective communication, and higher academic achievement.

“Ellen Galinsky—already the go-to person on interaction between families and the workplace—draws on fresh research to explain what we ought to be teaching our children. This is must-reading for everyone who cares about America’s fate in the 21st century.” – Judy Woodruff, Senior Correspondent for The PBS NewsHour Families and Work Institute President Ellen Galinsky (Ask the Children, The Six Stages of Parenthood) presents a book of groundbreaking advice based on the latest research on child development.

Providing a structured programme for teaching literacy to children and young people with dyslexia and specific literacy difficulties, this book makes explicit links between theory, research and practice. It offers a structured, cumulative, multi-sensory teaching programme for learners with dyslexia, and draws attention to some of the wider aspects of the learning styles and differences of learners with dyslexia such as memory, information processing and automaticity. The book discusses: – the rationale for a structured multi-sensory approach – the development of phonological, reading, writing and spelling skills – working with learners who have English as an additional language (EAL) – lesson structure and lesson-planning – alphabet and dictionary skills – memory work and study skills – teaching the programme to groups – ideas for working with young children. Designed to help support any learner, from ages five to 18, with dyslexia or specific learning difficulties, the authors encourage the use of the programme as part of everyday teaching to not only develop literacy but to put dyslexic learners in control of their own learning. There are tried and tested strategies and activities provided, which the reader can use to support their literacy work. Particularly useful for teachers working with learners who have special educational needs and specifically those with dyslexia, this book contains everything you need to help improve and develop the literacy skills of the learners in your setting. NEW by Kathleen Kelly and Sylvia Phillips! Assessment of Learners with Dyslexic-type Difficulties Sylvia Phillips, Kathleen Kelly and Liz Symes

Connecting theory to practice, this book highlights the importance of play for the social, emotional, and intellectual development of very young children. Combines theoretical and practical information and includes guidance about how to improve interactions with children, select materials for young children to use, and work with families to support children development. Through vignettes, photographs, and narrative text, learn a range of ideas to help infant-toddler teachers become more responsive to children's cues and more intentional in their interactions and play with children.
