Technical Writing and Presentation is a guide to writing reports and articles for presentation to technical people or to the scientific community. The book deals with the special requirements in writing technical and highly specialized reports. The book covers the complete phase from planning the work to be done to finally editing the manuscript. To start writing, the writer aims to have a clear objective and properly identifies his kind of readership. Then the author provides tips on gathering information and how to arrange these in standard sequences. The author then discusses the style of writing, choice of words and sentences, paragraph length, use of appropriate jargon and clichés and the use of passive construction of sentences. After providing some examples of good writing, the book addresses the importance of a good layout. This includes margins, spacing, headings, and preparing the manuscript. The use of illustrations, tone drawings, graphs, and photographs is discussed. The book then focuses on the editing process when the writer reviews his own work objectively. The text also gives tips on editing procedures as well as miscellaneous problems (use of copyrighted materials, footnotes, and references). Many scientists, researchers, technologists, students, and academic professors who have to write articles and papers of a technical nature will find this book handy.

Technical Writing: A Practical Guide for Engineers, Scientists, and Nontechnical Professionals, Second Edition enables readers to write, edit, and publish materials of a technical nature, including books, articles, reports, and electronic media. Written by a renowned engineer and widely published technical author, this guide complements traditional writer's reference manuals on technical writing through presentation of first-hand examples that help readers understand practical considerations in writing and producing technical content. These examples illustrate how a publication originates as well as various challenges and solutions. The second edition contains new material in every chapter including new topics, additional examples, insights, tips and tricks, new vignettes and more exercises. Appendices have been added for writing checklists and writing samples. The references and glossary have been updated and expanded. In addition, a focus on writing for the nontechnical persons working in the technology world and the nonnative English speaker has been incorporated. Written in an informal, conversational style, unlike traditional college writing texts, the book also contains many interesting vignettes and personal stories to add interest to otherwise stodgy lessons.
