The Geography Of Opportunity
Race
The geography of America's metropolitan regions is clearly color coded. But the ways in which distinctive racial attitudes and neighborhood preferences shape racial patterns in housing—and through them the geography of opportunity—are not widely understood.

The Geography Of Opportunity: Race And Housing Choice In ...

Geography of Ancestry, Inequality, and Opportunity. Our first question is whether meaningful variation in equality and opportunity exists across areas populated by different ancestral groups. Fig. 1 A–E plots the distribution of ancestries across CZs. These maps reveal considerable clustering: Germans and Scandinavians are overrepresented in the Midwest, and Italian and French descendants in the Northeast, while those with British ancestry are scattered throughout the country.

The Geography of Opportunity: Race and Housing Choice in ...

These methodological issues are highlighted in a geography of opportunity perspective, which calls attention to the continuing significance of race in patterning neighborhood outcomes (Briggs, 2005; powell and Graham, 2002; Squires and Kubrin, 2006). The limited racial/ethnic overlap in neighborhoods, combined with the impact of race-based stereotypes, may influence the utility of subjective assessments of neighborhood environment, which are commonly used in neighborhood effects research.

Geography of Opportunity: Race and Housing Choice in ...

A popular version of history trumpets the United States as a diverse "nation of immigrants," welcome to all. The truth, however, is that local communities have a long history of ambivalence toward new arrivals and minorities. Persistent patterns of segregation by race and income still exist in housing and schools, along with a growing emphasis on rapid metropolitan development (sprawl) that encourages upwardly mobile families to abandon older communities and their problems. This dual pattern is becoming increasingly important as America grows more diverse than ever and economic inequality increases. Two recent trends compel new attention to these issues. First, the geography of race and class represents a crucial litmus test for the new "regionalism"—the political movement to address the linked fortunes of cities and suburbs. Second, housing has all but disappeared as a major social policy issue over the past two decades. This timely book shows how unequal housing choices and sprawling development create an unequal geography of opportunity. It emerges from a project sponsored by the Civil Rights Project at Harvard University in collaboration with the Joint Center for Housing Studies and the Brookings Institution. The contributors—policy analysts, political observers, social scientists, and urban planners—document key patterns, their consequences, and how we can respond, taking a hard look at both successes and failures of the past. Place still matters, perhaps more than ever. High levels of segregation shape education and job opportunity, crime and insecurity, and long-term economic prospects. These problems cannot be addressed effectively if society assumes that segregation will take care of itself. Contributors include William Aggar (Harvard University), Judith Bell (PolicyLink), Angela Glover Blackwell (PolicyLink), Allegra Calde (Harvard), Karen Chapple (Cal-Berkeley), Camille Charles (Penn), Mary Cunningham (Urban Institute), Casey Dawkins (Virginia Tech), Stephanie DeLuca (Johns Hopkins), John Goering (CUNY), Edward Goetz (U. of Minnesota), Bruce Katz (Brookings), Barbara Lukermann (U. of Minnesota), Gerrit Knaap (U. of Maryland), Arthur Nelson (Virginia Tech), Rolf Pendall (Cornell), Susan J. Popkin (Urban Institute), James Rosenbaum (Northwestern), Stephen L. Ross (U. of Connecticut), Mara Sidney (Rutgers), Phillip Tegeler (Poverty and Race Research Action Council), Tammy Tuck (Northwestern), Margery Austin Turner (Urban Institute), William Julius Wilson (Harvard).

"A multidisciplinary examination of the social and economic changes resulting from increased diversity and their implications for economic opportunity and growth given persistent patterns of segregation by race and class, offering both public policy and private initiatives that would respond to those challenges"--Provided by publisher.

From a nationally recognized expert, a fresh and original argument for bettering affirmative action Race-based affirmative action had been declining as a factor in university admissions even before the recent spate of related cases arrived at the Supreme Court. Since Ward Connerly kickstarted a state-by-state political mobilization against affirmative action in the mid-1990s, the percentage of four-year public colleges that consider racial or ethnic status in admissions has fallen from 60 percent to 35 percent. Only 45 percent of private colleges still explicitly consider race, with elite schools more likely to do so, although they too have retreated. For law professor and civil rights activist Sheryl Cashin, this isn't entirely bad news, because as she argues, affirmative action as currently practiced does little to help disadvantaged people. The truly disadvantaged—Black and brown children trapped in high-poverty environs—are not getting the quality schooling they need in part because backlash and wedge politics undermine any possibility for common-sense public policies. Using place instead of race in diversity programming, she writes, will better amend the structural disadvantages endured by many children of color, while enhancing the possibility that we might one day move past the racial resentment that affirmative action engenders. In Place, Not Race, Cashin reimagines affirmative action and champions place-based policies, arguing that college applicants who have thrived despite exposure to neighborhood or school poverty are deserving of special consideration. Those blessed to have come of age in poverty-free havens are not. Sixty years since the historic decision, we're undoubtedly far from meeting the promise of Brown v. Board of Education, but Cashin offers a new framework for true inclusion for the millions of children who live separate and unequal lives. Her proposals include making standardized tests optional, replacing merit-based financial aid with need-based financial aid, and recruiting high-achieving students from overlooked places, among other steps that encourage cross-racial alliances and social mobility. A call for action toward the long overdue promise of equality, Place, Not Race persuasively shows how the social costs of racial preferences actually outweigh any of the marginal benefits when effective race-neutral alternatives are available.

Geography of Opportunity: Race and Housing Choice in ...

A half century after the Fair Housing Act, despite ongoing transformations of the geography of privilege and poverty, residential segregation by race and income continues to shape urban and suburban neighborhoods in the United States. Why do people live where they do? What explains segregation's persistence? And why is addressing segregation so complicated? The Dream Revisited brings together a range of expert viewpoints on the causes and consequences of the nation's separate and unequal living patterns. Leading scholars and practitioners, including civil rights advocates, affordable housing developers, elected officials, and fair housing lawyers, discuss the nature of and policy responses to residential segregation. Essays scrutinize the factors that sustain segregation, including persistent barriers to mobility and complex neighborhood preferences, and its consequences from health to home finance and from policing to politics. They debate how actively and in what ways the government should intervene in housing markets, and responses to gentrification from a diversity of viewpoints. A probing examination of a deeply rooted problem, The Dream Revisited offers pressing insights into the changing face of urban inequality.

The 20th Century has been marked by enormous change in terms of how we define race. In large part, we have thrown out the antiquated notions of the 1800s, giving way to a more realistic, sociocultural view of the world. The United States is, perhaps more than any other industrialized country, distinguished by the size and diversity of its racial and ethnic minority populations. Current trends promise that these features will endure. Fifty years from now, there will most likely be no single majority group in the United States. How will we fare as a nation when race-based issues such as immigration, job opportunities, and affirmative action are already so contentious today? In America Becoming, leading scholars and commentators explore past and current trends among African Americans, Hispanics, Asian Americans, and Native Americans in the context of a white majority. This volume presents the most up-to-date findings and analysis on racial and social dynamics, with recommendations for ongoing research. It examines compelling issues in the field of race relations, including: Race and ethnicity in criminal justice. Demographic and social trends for Hispanics, Asian Americans, and Native Americans. Trends in minority-owned businesses. Wealth, welfare, and racial stratification. Residential segregation and the meaning of "neighborhood." Disparities in educational test scores among races and ethnicities. Health and development for minority children, adolescents, and adults. Race and ethnicity in the labor market, including the role of minorities in America's military. Immigration and the dynamics of race and ethnicity. The changing meaning of race. Changing racial attitudes. This collection of papers, compiled and edited by distinguished leaders in the behavioral and social sciences, represents the most current literature in the field. Volume 1 covers demographic trends, immigration, racial attitudes, and the geography of opportunity. Volume 2 deals with the criminal justice system, the labor market, welfare, and health trends. Both books will be of great interest to educators, scholars, researchers, students, social scientists, and policymakers.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Rewriting the "origin stories" of the Anthropocene No geology is neutral, writes Kathryn Yusoff. Tracing the color line of the Anthropocene, A Billion Black Anthropocenes or None examines how the grammar of geology is foundational to establishing the extractive economies of subjective life and the earth under colonialism and slavery. Yusoff initiates a transdisciplinary conversation between feminist black theory, geography, and the earth sciences, addressing the politics of the Anthropocene within the context of race, materiality, deep time, and the afterlives of geology. Forerunners is a thought-in-process series of breakthrough digital works. Written between fresh ideas and finished books, Forerunners draws on scholarly work initiated in notable blogs, social media, conference plenaries, journal articles, and the synergy of academic exchange. This is gray literature publishing: where intense thinking, change, and speculation take place in scholarship.

This analysis of how the ability to participate in society online affects political and economic opportunity finds that technology use matters in wages and income and civic participation and voting.

Shows how government created "ghettos" and affluent white space and entrenched a system of American residential caste that is the linchpin of US inequality—and issues a call for abolition. The iconic Black hood, like slavery and Jim Crow, is a peculiar American institution animated by the ideology of white supremacy. Politicians and people of all colors propagated "ghetto" myths to justify racist policies that concentrated poverty in the hood and created high-opportunity white spaces. In White Space, Black Hood, Sheryl J Cashin traces the history of anti-Black residential caste—boundary maintenance, opportunity hoarding, and stereotype-driven surveillance—and unpacks its current legacy so we can begin the work to dismantle the structures and policies that undermine Black lives. Drawing on nearly 2 decades of research in cities including Baltimore, St. Louis, Chicago, New York, and Cleveland, Cashin traces the processes of residential caste as it relates to housing, policing, schools, and transportation. She contends that geography is now central to American caste. Poverty-free havens and poverty-dense hoods would not exist if the state had not designed, constructed, and maintained this physical racial order. Cashin calls for abolition of these state-sanctioned processes. The ultimate goal is to change the lens through which society sees residents of poor Black neighborhoods from presumed thief to presumed citizen, and to transform the relationship of the state with these neighborhoods from punitive to caring. She calls for investment in a new infrastructure of opportunity in poor Black neighborhoods, including richly resourced schools and neighborhood centers, public transit, Peacemaker Fellowships, universal basic incomes, housing choice vouchers for residents, and mandatory inclusive housing elsewhere. Deeply researched and sharply written, White Space, Black Hood is a call to action for repairing what white supremacy still breaks. Includes historical photos, maps, and charts that illuminate the history of residential segregation as an institution and a tactic of racial oppression.
