"The Immune System" is adapted from "Immunobiology" by Janeway, Travers, and Walport. About the Author Peter Parham is on the faculty at Stanford University where he is a Professor in the Departments of Structural Biology, and Microbiology and Immunology.

"The Immune System, Fourth Edition, emphasizes the human immune system and synthesizes immunological concepts into a coherent, up-to-date, and reader-friendly account of how the immune system works. Written for undergraduate, medical, veterinary, dental, and pharmacy students, it makes generous use of medical examples to illustrate points. The Fourth Edition has been extensively revised and updated. Innate immunity has undergone major revision to reflect this expanding and fast-moving field, and is now divided between two chapters: Chapter 2 "Innate Immunity: The Immediate Response to Infection," which deals with complement and other soluble molecules of innate immunity such as antimicrobial peptides, and Chapter 3 "Innate Immunity: The Induced Response to Infection," which deals mainly with the cellular response. Chapters 4-9 have been updated and material has been consolidated to eliminate repetition. Mucosal immunology has exploded as a field since the Third Edition was published, thus its coverage in chapter 10, now devoted to the topic, has been significantly expanded and updated. Also, more emphasis is placed on commensal microorganisms, particularly of the gut, and their interactions with the immune system. Immunological memory and the secondary immune response is now the first part of Chapter 11. The

second part of this chapter, entitled "Vaccination to Prevent Infectious Disease," will include new and more modern material. "Bridging Innate and Adaptive Immunity" will also have its own chapter. The remaining clinical chapters will be revised and updated with new immunotherapies, but their content and organization will remain largely the same. The Fourth Edition will be accompanied by an updated and greatly expanded question bank, as well as PowerPoints and JPEGs of all the figures in the text."--

Pharmacists face ethical choices constantly -- sometimes dramatic life-and-death decisions, but more often subtle, less conspicuous choices that are nonetheless important. Among the topics confronted are assisted suicide, conscientious refusal, pain management, equitable distribution of drug resources within institutions and managed care plans, confidentiality, and alternative and non-traditional therapies. Veatch and Haddad's book, first published in 1999, was the first collection of case studies based on the real experiences of practicing pharmacists, for use as a teaching tool for pharmacy students. The second edition accounts for the many changes in pharmacy since 1999, including assisted suicide in Oregon, the purchasing of less expensive drugs from Canada, and the influence of managed care on prescriptions. The presentation of some cases is shortened, most are revised and updated, and two new chapters have been added. The first new chapter presents a new model for analyzing cases, while the second focuses on the ethics of new drug distribution systems, for example hospitals where pharmacists are forced to choose drugs based on cost-effectiveness, and internet based pharmacies.
