Consistent with the most recent research in brain science on fear and happiness, this imaginative tale gift wraps all the power of a groundbreaking self-help book into one rollercoaster of a story. Colorful, thought-provoking lessons stay with the reader long after finishing the last page. A car accident leaves Liza, a successful single mom, unconscious. Trapped inside her subconscious and hijacked by her imagination, Liza learns firsthand how her thinking shapes her life. Her thoughts carry her away to dangerous and mysterious places, each gifting a lesson of how fear influences her thoughts, beliefs and the fullness of love in her relationships. Happiness, she discovers, is a function of her thinking. During her journey Liza uncovers secrets to rid herself of the fear-based behaviors that are inconsistent with her true self. To her delight, breaking free from the shackles of fear is simpler than she ever dreamed. Happiness is just a thought away...with practice. The book serves as an ongoing resource for those interested in the art of intentional living.

Draws on oral histories of the Great Plains blizzard of 1888 to depict the experiences of two teachers, a servant, and a reporter who risk everything to protect the children of immigrant homesteaders.

!--StartFragment-- In her most popular bestseller ever, the beloved author and minister Joyce Meyer shows readers how to change their lives by changing their minds. Joyce Meyer teaches how to deal with thousands of thoughts that people think every day and how to focus the mind the way God thinks. And she shares the trials, tragedies, and ultimate victories from her own marriage, family, and ministry that led her to wondrous, life-transforming truth—and reveals her thoughts and feelings every step of the way. Why our brains aren't built for media multitasking, and how we can learn to live with technology in a more balanced way. "Brilliant and practical, just what we need in these techno-human times."—Jack Kornfield, author of The Wise Heart Most of us will freely admit that we are obsessed with our devices. We pride ourselves on our ability to multitask—read work email, reply to a text, check Facebook, watch a video clip. Talk on the phone, send a text, drive a car. Enjoy family dinner with a glowing smartphone next to our plates. We can do it all, 24/7! Never mind the errors in the email, the near-miss on the road, and the unheard conversation at the table. In The Distracted Mind, Adam Gazzaley and Larry Rosen—a neuroscientist and a psychologist—explain why our brains aren't built for multitasking, and suggest better ways to live in a high-tech world without giving up our modern technology. The authors explain that our brains are limited in their ability to pay attention. We don't really multitask but rather switch rapidly between tasks. Distractions and interruptions, often technology-related—referred to by the authors as “interference”—collide with our goal-setting abilities. We want to finish this paper/spreadsheet/sentence, but our phone signals an incoming message and we drop everything. Even without an alert, we decide that we “must” check in on social media immediately. Gazzaley and Rosen offer practical strategies, backed by science, to fight distraction. We can change our brains with meditation, video games, and physical exercise; we can change our behavior by planning our accessibility and recognizing our anxiety about being out of touch even briefly. They don't suggest that we give up our devices, but that we use them in a more balanced way.

Considered by many to be mentally retarded, a brilliant, impatient fifth-grader with cerebral palsy discovers a technological device that will allow her to speak for the first time.

#1 New York Times Bestseller “THIS. This is the right book for right now. Yes, learning requires focus. But, unlearning and relearning requires much more—it requires choosing courage over comfort. In Think Again, Adam Grant weaves together research and storytelling to help us build the intellectual and emotional muscle we need to stay curious enough about the world to actually change it. I've never felt so hopeful about what I don't know.” —Brené Brown, Ph.D., #1 New York Times bestselling author of Dare to Lead The bestselling author of Give and Take and Originals examines the critical art of rethinking: learning to question your opinions and open other people's minds, which can position you for excellence at work and wisdom in life. Intelligence is usually seen as the ability to think and learn, but in a rapidly changing world, that might matter more: the ability to rethink and unlearn. In our daily lives, too many of us favor the comfort of conviction over the discomfort of doubt. We listen to opinions that make us feel good, instead of ideas that make us think hard. We see disagreement as a threat to our egos, rather than an opportunity to learn. We surround ourselves with people who agree with our conclusions, when we should be gravitating toward those who challenge our thought process. The result is that our beliefs get brittle long before our bones. We think too much like preachers defending our sacred beliefs, prosecutors proving the other side wrong, and politicians campaigning for approval—and too little like scientists searching for truth. Intelligence is no cure, and it can even be a curse: being good at thinking can make us worse at rethinking. The brighter we are, the blinder to our own limitations we can become. Organizational psychologist Adam Grant is an expert on opening other people's minds—and our own. As Wharton's top-rated professor and the bestselling author of Originals and Give and Take, he makes it one of his guiding principles to argue like he's right but listen like he's wrong. With bold ideas and rigorous evidence, he investigates how we can embrace the joy of being wrong, bring nuance to charged conversations, and build schools, workplaces, and communities of lifelong learners. You'll learn how an international debate champion wins arguments, a Black musician persuades white supremacists to abandon hate, a vaccine whisperer convinces concerned parents to immunize their children, and Adam has coaxed Yankees fans to root for the Red Sox. Think Again reveals that we don't have to believe everything we think or internalize everything we feel. It's an invitation to let go of views that are no longer serving us well and prize mental flexibility over foolish consistency. If knowledge is power, knowing what we don't know is wisdom.

It is never too early to start comprehension instruction. In fact, reading begins with meaning making. Andie Cunningham and Ruth Shagoury designed a reading program for five- and six-year-olds based on this premise. Most of the students in Andie's Portland, Oregon, kindergarten class have little or no alphabet knowledge when they enter the classroom in the fall. English is a second—or third—language for many of the children in this low-income neighborhood. Through research-based principles, carefully structured routines, and innovative activities, even the youngest learners can develop comprehension skills from their first days in school. The children in Starting with Comprehension are grappling with school culture for the first time and learning to work with classmates who speak a variety of different languages. These emergent readers learn to present their understanding of what they read through writing, talk, movement, and art. Kindergartners and preschoolers are different from readers who know how to decode texts. Andie and Ruth show how comprehension skills can be nurtured and strengthened even before decoding begins. In this classroom, meaning making becomes part of community building as children link reading, thinking, and communicating.

Grounded in cutting-edge research on brain?behavior relationships, this book explores how language and reading disorders develop—and presents exciting new approaches to examining and treating them. Experts from multiple disciplines investigate how children's learning trajectories in spoken and written language are shaped by the dynamic interplay of neurological, experiential, and behavioral processes. The volume includes innovative neuroimaging applications and other state-of-the-science techniques that help shed new light on childhood disorders such as dyslexia, language impairment, writing disabilities, and autism. Implications for evidence-based diagnosis, intervention, and instruction are discussed. Illustrations include five color plates.
