However, the word whistle continues to be used by railroaders in  
referring to such signaling practices as "whistling off" (sounding the  
horn when a train gets underway). The need for a whistle on a  
locomotive exists because trains move on fixed rails and thus are  
uniquely susceptible to collision. This susceptibility is exacerbated  
by a train's enormous weight and inertia, which make it difficult to  
quickly stop when encountering an obstacle.

The LuxoGear Emergency Whistles is a durable whistle with a powerful sound. The double tube makes a high pitched noise up to 120 dB, enough to be heard more than a mile away. The pealess whistle has no moving parts, which means no chances to jam, break or freeze.

Steven Ericson has written what promises to be the most thorough study of the Japanese railroad industry in the English language. In addition to the body of research on the industry itself, Ericson has provided an astute analysis of the politics of development and the relationship between state and private enterprise in the Japanese

railroad industry during the Meiji period. He explores the economic role of government and the nature of state-business relations in the course of Japan's modern transformation, and at the same time challenges the tendency of current scholarship to minimize the role of the Japanese government as well as commercial banks in Meiji industrialization. By providing a fresh perspective on the "strong state/weak state" debate through detailed analysis of the 1906-1907 railway nationalization, Ericson's study sheds new light on the Meiji origins of modern Japanese industrial policy and politics, filling a major gap in the available literature on the Meiji political economy.

everywhere. World War II was over and railroads were retiring war-weary steam locomotives in favor of shiny new diesel locomotives. Deane Ellsworth, a young train-crazy lad at the time, wondered if anyone anywhere cared about the steam locomotives' musical train whistles being replaced by the monotone horns. Indeed, a public accustomed to the melodious sounds of steam whistles registered concerns about these new horns as a growing source of noise, confusion, and accidents. As it happened, Ellsworth would go on to develop the K5LA and K3LA airhorns that are used on thousands of locomotives across North America today. In *Making Trains Sound Like Trains*, he relates the compelling tale - part history, part personal story - of the evolution of the train horn from the postwar period to today. Along the way, readers meet the colorful characters who found themselves involved in the story: loggers, poets,

How do participants display affectivity in social interaction? Based on recordings of authentic everyday conversations and radio phone-ins, this study offers a fine-grained analysis of how recipients of affect-laden informings deploy sound objects, i.e. interjections (oh, ooh and ah) and paralinguistic signals (whistle and clicks), for responsive displays of affectivity. Examining the use of such sound objects across a number of interactional activities including news telling, troubles talk, complaining, assessments and repair, the study

provides evidence that the sound pattern and sequential placement of sound objects systematically contribute to their specific meaning-making in interaction, i.e. the management of sequence organisation and interactional relevancies (e.g. affiliation).

Presenting an in-depth analysis of a little researched area of language use from an interactional linguistic perspective, the book will be of theoretical and methodological interest to an audience with a background in linguistics, sociology and conversational studies.
