There's plenty of meat throughout the rest of The Space Barons to keep readers interested—even those who already know a lot about the commercial space industry. The Space Barons focuses on SpaceX, Blue Origin, and Virgin Galactic, with an emphasis on their eccentric leaders: Elon Musk, Jeff Bezos, and Richard Branson. There's also a lot about Paul Allen, who bankrolled SpaceShipOne, the first private vehicle to reach space.

*The Space Barons: Elon Musk, Jeff Bezos, and the Quest to Colonize the Cosmos (Book)* : Davenport, Christian : Traces the historic quest to rekindle the human exploration of space as navigated by billionaire entrepreneurs, sharing insights into how professional rivalry and Silicon Valley innovations are lowering the cost of space travel and exceeding the achievements of NASA.

The historic quest to rekindle the human exploration and colonization of space led by two rivals and their vast fortunes, egos, and visions of space as the next entrepreneurial frontier *The Space Barons* is the story of a group of billionaire entrepreneurs who are pouring their fortunes into the epic resurrection of the American space program. Nearly a half-century after Neil Armstrong walked on the moon, these Space Barons-most notably Elon Musk and Jeff Bezos, along with Richard Branson and Paul Allen-are using Silicon Valley-style innovation to dramatically lower the cost of space travel, and send humans even further than NASA has gone. These entrepreneurs have founded some of the biggest brands in the world-Amazon, Microsoft, Virgin, Tesla, PayPal-and upended industry after industry. Now they are pursuing the biggest disruption of all: space. Based on years of reporting and exclusive interviews with all four billionaires, this authoritative account is a dramatic tale of risk and high adventure, the birth of a new Space Age, fueled by some of the world's richest men as they struggle to end governments' monopoly on the cosmos. *The Space Barons* is also a story of rivalry-hard-charging startups warring with established contractors, and the personal clashes of the leaders of this new space movement, particularly Musk and Bezos, as they aim for the moon and

Mars and beyond.

We're on the cusp of new era in the great adventure of space exploration. More than a half-century ago, humanity first hurled objects into space, and almost 50 years ago, astronauts first walked on the moon. Since then, we have explored Earth's orbit with shuttles, capsules, and space stations; sent robots to Mars, Venus, Mercury, Jupiter, Saturn, and Uranus; sampled a comet; sent telescopes into orbit; and charted most of our own planet. What does the future hold? In *Space 2.0*, space historian Rod Pyle, in collaboration with the National Space Society, will give you an inside look at the next few decades of spaceflight and long-term plans for exploration, utilization, and settlement. No longer the exclusive domain of government entities such as NASA and other national agencies, space exploration is rapidly becoming privatized, with entrepreneurial startups building huge rocket boosters, satellites, rocket engines, asteroid probes, prospecting craft, and even commercial lunar cargo landers to open this new frontier. Research into ever more sophisticated propulsion and life support systems will soon enable the journey to Mars and destinations deeper in our solar system. As these technologies continue to move forward, there are virtually no limits to human spaceflight and robotic exploration. While the world has waited since the Apollo lunar program for the next "giant leap," these critical innovations, most of which are within our grasp with today's technology, will change the way we live, both in space and on Earth. A new space age—and with it, a new age of peace and prosperity on Earth, and settlement beyond our planet—can be ours. Speaking with key leaders of the latest space programs and innovations, Pyle shares the excitement and promise of this new era of exploration and economic development. From NASA and the Russian space agency Roscosmos, to emerging leaders in the private sector such as SpaceX, Blue Origin, Moon Express, Virgin Galactic, and many others, *Space 2.0* examines the new partnerships that are revolutionizing spaceflight and changing the way we reach for the stars.

Look at the future of persecution. One day soon the only refuge for the faithful may be Space. Follow a desperate couple fighting isolation and equipment malfunction to pilot a gas-collecting balloon ship to the outer planets. Michael, crown prince of the Space Empire hopes to save his people from external attack with an internal rebellion and a battle cruiser like no other. His plans are shaken by a forbidden romance, political turmoil, and the discovery of Earth's Fourth Empire. Michael and his best friend Randolph might save or shatter the Space Empire's last hope for the future.

Even as President Barack Obama calls on NASA to develop "game-changing" technologies, the space agency is undeniably in decline. In 2010, the country continues to shrink its space ambition as it has since the early 1990s. The American era of human space flight is essentially over. How did this happen? *Falling Back to Earth* shows that it was triggered by the fall of the Berlin Wall and the precipitous end of the Cold War that effectively ended large-scale government science initiatives and sped the decline of the aerospace and defense industries. The story is told by Mark Albrecht, President George H.W. Bush's principal adviser for space, who held key positions during the inflection point, 1989 to 1992, when NASA's national centrality began slipping. Albrecht's firsthand story charts the end of the great Cold War space race—USA vs. USSR—and the demise of the aerospace and technology enterprises that fueled it. He journeys through the techno-empires created by the two superpowers, the largest most advanced and secretive collection of technologies in the history of mankind. Told from the perspective of the White House and from industry—both in America and Russia—in the immediate post-Cold War environment, it's the story of

the rise and fall of two space industries after rival governments failed to segue to a new reality and rationale once the animating force for their existence was eliminated. The story is told in personal terms and provides a unique view into the inner workings of the Bush White House and especially the space efforts of Vice President Dan Quayle. It offers a unique and candid view, from the ground in Moscow and from the inner sanctum of the White House, of the elite Russian space enterprise before and after the end of the Cold War. It paints colorful portraits of the early days of Soviet-era privatization and "the new Russia." It's the story of suddenly unemployed Russian scientists forced to make hard decisions and ethical compromises when the Soviet style 'command economy' collapsed. The shotgun collaborations between Russia and American aerospace industries, encouraged and supported by the two governments to shore up flagging national support for independent initiatives, to monitor and prevent the proliferation of ballistic missile technology to dangerous and uncontrolled non-state actors and to address a growing commercial space industry is a story of a wild ride of unprecedented action, improbable intrusions into previously impenetrable institutions and fox hole friendships between recent fierce adversaries. Once, Americans believed innovation was ingrained in their genes. Fortunately, the technology revolution fueled by the Cold War has a long tail. Twenty years later we are still feasting on the fruits of its seeds. But the engine of invention has slowly been ground to a halt since November, 1989 and President Obama's effective cancellation of the human space program may be the final stroke. Soon we will be eating seed corn for survival rather than tending the fields of grain it has bountifully provided.

The author of *The Case for Mars* provides an insider's look at the future of space exploration and travel, examining the true potential for human expeditions into outer space, the prospects for colonization of the outer planets of the solar system, and their implications for the future of humankind. Reprint.

For hundreds of thousands of years, humanity focused on space as a location. Today, space is not just a destination-it is a domain, an ecosystem, an enabler of progress, and quite possibly the most valuable industry of the twenty-first century. Three things you need to know: Space as an industry is notoriously complex-which means it's misunderstood. Space influences and benefits nearly every other industry on the planet. Accessing space has never been easier. Space investor and entrepreneur Robert C. Jacobson provides a comprehensive overview of this spectacular industry, allowing everyone on Earth to understand the integral role space plays in our lives and how it will continue to transform the world. Over one hundred industry experts share exclusive insights, presenting a 360-degree view of the wide-ranging space industry, its emerging opportunities, investment potential, benefits on Earth, and more. *Space Is Open for Business* provides a framework for those outside of the industry to understand the critical context that led to the commercial movement known as NewSpace, illustrating how private sector trailblazers have evolved this \$350 billion global industry and how NewSpace's exponential growth will lead our world into a new era of progress. Foreword by David S. Rose Founder, New York Angels | Associate Founder, Singularity University "A sweeping guide that will inspire you to think big about space, the space economy, and your role within it." Matthew C. This is an engaging book ready to take you on an afternoon voyage through the cosmos. You help with experiments and learn some of the processes that go into making up scientific hypotheses on relativity, the speed of light and other light matters. Some humor is interjected to soften the dryness of the subject matter. Delightful illustrations will welcome you along for the fun. Come along for the ride and begin your adventure into light science. Find out why some ideas from days past are no longer considered correct and how that changes the way we will all look at the science of the stars in the future.

Clutter has a negative effect on your life. You want to live differently, but you haven't been able to make progress. Marcie Lovett, author of *The Clutter Book*, will motivate you to make the changes you want. Learn to let go of what you don't need and find room for what you value. The direct, accessible writing style and interactive exercises will inspire you to succeed. In this book, Marcie guides you through the process of letting go of the clutter that is keeping you from achieving success. Whether your clutter is caused by things, commitments or thoughts, Marcie encourages you to make the choices to conquer your challenges. If previous attempts at letting go of clutter have not been successful for you, you will benefit from the motivation and wisdom Marcie offers. Written in a straightforward and accessible style, filled with insight and real-life stories, the book enables readers to learn from the experience of others and overcome obstacles to success. You will understand why you keep clutter, save time and money by avoiding unnecessary purchases, discover the habits that hold you back, find ways to fight procrastination and create systems that allow you to retrieve and return items. Whether you want to live with less or live with what you have, this is the book for you.

New Adult Paranormal Romance \*\* Mature Content \*\* Recommended for ages 16+ due to sexual situations and language This book includes realistic scenes of domestic violence that are not gratuitously graphic, but may be disturbing to sensitive readers. Hearts break. Souls shatter. Love lies in *The Space Beyond*. As members of the Phoenix, Jeric and Leni are thrust into their new lives, expected to lead Earth's Guardians. But Leni struggles with trusting her own soul, and Jeric is more concerned about keeping Leni safe than meeting others' demands. When Darkness swarms Lake Haven, they embark on their first mission with little preparation and no idea which soul the Dark hunts. Born and raised in Lake Haven, Bex hopes to escape her small-town life, ideally in the arms of her soul mate. She knows he exists, and her heart aches with the need to find him. When her long-lost mama calls to announce she's knockin' on death's door, Bex reluctantly makes the trip to see the uncaring bitch (bless her heart), only to be knocked off her feet by the sexy and charming Dr. Mason Hayes. Is he really The One? Leni's soul felt an instant connection to Bex, but if Bex found her soul mate, she isn't their mission. So who is, and why does Leni instinctively feel drawn to her? Can Leni even trust her intuition? And will Jeric step up and lead when the time comes or continue to hold them back? If they don't learn to trust themselves and each other quickly, Darkness will claim them all...along with the rest of Earth's souls.
