Developed in association with the American Psychiatric Association, this manual provides extensive knowledge of mental disorders and intellectual disabilities to aid in psychiatric diagnosis. To combat the all too frequent problem of misdiagnosis, this book helps clinicians identify signs and symptoms of specific disorders, allowing for a more comprehensive and thorough diagnosis and ensuring that patients receive appropriate care. The manual represents the collaborative effort of a number of experts and is an invaluable tool in improving our understanding of mental disorders and their unique expression in those with intellectual disabilities.

One problem with helicoptering is that there are virtually no flying clubs, at least of the sort that exist for fixed wing, so pilots get very little chance to swap stories, unless they meet in a muddy field somewhere, waiting for their passengers. As a result, the same mistakes are being made and the same lessons learnt separately instead of being shared - it's comforting sometimes to know that you're not the only one to inflate the floats by accident! Even when you do get into a school, there are still a couple of things they don't teach you, namely that aviation runs on paperwork, and how to get a job, including interview techniques, etc - flying the aircraft is actually less than a third of the job. Another is that nobody really tells you anything, either about the job you have to do (from the customer) or how to do it (the company) - you will always be up against the other guy who managed to do it last week! Sure, there will be training, but, even in the best companies, this will be relatively minimal. This book is an attempt to correct the above situations by gathering together as much information as possible for helicopter pilots, old and new, professional and otherwise, in an attempt to explain the why, so the how will become easier (you will be so much more useful if you know what the customer is trying to achieve). In short, this is all the stuff nobody taught me - every tip and trick I have learnt has been included.

Southeast Asia is a vast, populous and diverse region. The Association of Southeast Asian Nations (ASEAN) promotes democracy and human rights as central to regional order and cooperation, but most members are not democratic and have poor or questionable human rights records. This book explores why Southeast Asian countries have collectively adopted the rhetoric of democracy and human rights, and argues that they are motivated by their concerns about external regional legitimacy. It analyses ASEAN's references to democracy and the reality of backsliding in several countries; examines the adoption of human rights rhetoric; and considers the implications for how we understand regional cooperation. The book is relevant for students and analysts who are interested in regionalism in Southeast Asia and elsewhere - particularly given growing global concerns about liberal democracy and the gaps between rhetoric and political realities.

Plastics possess properties that have revolutionized the manufacture of products in the 20th century and beyond. It remains critical to understand their behavior throughout their life cycle, from manufacture to use and eventually to reclamation and disposal. This volume highlights the most prominent tools in physical and chemical analysis techniques and applications. A practical reference for performing measurements, solving problems, and investigating behavioral phenomena, the editors advocate a phenomenological approach, relying on case studies and illustrations to represent possible outcomes of each technique and presenting the basic governing equations where necessary.

What is it like to drive a Challenger tank over desert terrain for six days in a row? Or hover an Apache AH1 attack helicopter a hundred meters above enemy ground? How quickly can a Sapper clear a field of unexploded devices, or build a bridge—or blow one up? What is it like to fix bayonets, and engage in hand to hand combat, or train a 5.56 mm SA80 sniper sight on an enemy soldier, and pull the trigger? How do you find out what a soldier must learn on his way to war? Ask him. In this extraordinary book, Danny Danziger interviews the people who fight our wars for us, providing a unique insight into the reality of what we ask of our armed forces. Groundbreaking and utterly compelling, *We Are Soldiers* takes the reader to the heart of the 21st century soldier's experience.

During more than 30 years, as a collaborator with American, European and Latin American electronics magazines (\*), has published a large assortment of practical circuits using common parts. In 1999 he included the first selection in a volume published by Prompt Publications in USA. The idea was to proceed with the series, publishing many volumes more. But, Prompt closed his activities and the idea was forgotten although the first volume became a best seller. Now with his own publishing house (NCB Publications) the author returned with the idea of make many volumes more of the series. So, the second volume is here proceeding with the same idea: give simple projects to the experimenters who want learn electronics using common parts and with no need of special knowledge about electronics. So, as in the first volume, many of the projects collected by the author are included in this volume, most of which you can build in one evening. The projects range from fun types through practical types to amusement types. Of course, there are other devices that can be used to teach you something about circuits and components. An important feature of these projects are the ideas to Explore, intended for students looking for projects in science or to use in practical research. This ideal can be complemented by our book *Science Fair and Technology Education Projects*, also published in English by the author. We can consider this book as a source book of the easiest and fun-to-make of hundreds of projects created and published by the author during his life. (see more about Newton C. Braga in "about the author" in his site).
