Edited by one of the best-known and most widely respected figures in the field, "Planning for Information Systems" is a comprehensive, single source overview of the myriad ideas and processes that are identified with IS planning. While many chapters deal with high level strategic planning, the book gives equal attention to on-the-ground planning issues. Part I, 'Key Concepts of IS Planning', focuses on how IS planning has evolved over the years; business-IS strategic alignment; and the role of dynamic organizational capabilities in leveraging IS competencies. Part II, 'The Organizational IS Planning Process,' describes IS planning in terms of critical success factors and includes a knowledge-based view of IS planning; a practical assessment of strategic alignment; the IT budgeting process; the search for an optimal

level of IS strategic planning; and the role of organizational learning in IS planning. Part III, 'IS Investment Planning', deals with predicting the value that an IS project may have; a 'rational expectations' approach to assessing project payoffs; assessing the social costs and benefits of projects; an options-based approach to managing project risks; planning for project teams; and the moderating effects of coordinated planning. Part IV, 'Goals and Outcomes of IS Planning', considers information strategy as a goal and/or outcome of IS planning; IT infrastructure as a goal or outcome; competitive advantage as a goal or outcome; e-process partnership chains; and planning successful Internet-based projects.

In light of the increasing global competition among both multinational companies and national economies, Barbara Samuels examines a source of economic tension that has broad social implications: as multinational companies (MNCs) strive for cheaper labor and new markets, less-developed countries (LDCs) are becoming more concerned with extracting benefits from these companies to achieve their development objectives. Samuels centers her study on the variables shaping the responses of MNCs to national demands while considering current debates on country risk, global competitiveness, and national industrial policy. Advancing a micro-view of the MNC and its host country in two case studies, Samuels shows how an MNC subsidiary's integration with headquarters and its closeness with local government affect its management of risk and its ability to deal with LDC demands. Here the author investigates the labor and investment

policy changes brought about when various automotive subsidiaries interacted with national interest groups in Brazil and with the government in Mexico. Both cases illustrate how the policy response of one subsidiary creates the dynamics for defensive policy changes of its competitors. MNC managers and LDC policymakers can draw important conclusions.
