In this remarkable book on computer design, long-known in the field and widely used in manuscript form, Gerrit A. Blaauw and Frederick P. Brooks, Jr. provide a definitive guide and reference for practicing computer architects and for students. The book complements Brooks' recently updated classic, *The Mythical Man-Month*, focusing here on the design of hardware and there on software, here on the content of computer architecture and there on the process of architecture design.

The book's focus on architecture issues complements Blaauw's early work on implementation techniques. Having experienced most of the computer age, the authors draw heavily on their first-hand knowledge, emphasizing timeless insights and observations. Blaauw and Brooks first develop a conceptual framework for understanding computer architecture. They then describe not only what present architectural practice is, but how it came to be so. A major theme is the early divergence and the later reconvergence of computer architectures. They examine both innovations that survived and became part of the standard computer, and the many ideas that were explored in real machines but did not survive. In describing the discards, they also address why these ideas did not make it. The authors' goals are to analyze

and systematize familiar design alternatives, and to introduce you to unfamiliar ones. They illuminate their discussion with detailed executable descriptions of both early and more recent computers. The designer's most important study, they argue, is other people's designs. This book's computer zoo will give you a unique resource for precise information about 30 important machines. Armed with the factors pro and con on the various known solutions to design problems, you will be better able to determine the most fruitful architectural course for your own design. 0201105578B04062001

attempted to reconcile "sin" with a modern understanding of sexuality. Andrew Harvey's *The Essential Gay Mystics*, however, is predicated on the assumption that sin and sex don't need to be reconciled and that gay sexuality is innately spiritual. Excerpting passages from 60 gay and lesbian writers--covering 20 centuries and at least a dozen traditions including classical Greek, Native American, Sufic, and Christian-- Harvey explores a variety of religious and sexual experiences. His extensive research, empathetic perspective, and compelling grasp of spirituality make this book not only unique, but also vital to an understanding of contemporary theology and religion.
