Weather and Climate Laboratory Manual: Timothy Canty

Introduction to Weather & Climate Lab Manual is designed to be used in an introductory college-level course in weather and climate. Although technically a first edition, it consists entirely of lab exercises that have been used (and refined as necessary) for over 20 years in the Introduction to Weather and Climate course at Salisbury University. A particular strength of the manual is that it covers the key topics with more in-text explanation and instruction than is found in most other manuals.

Developed by the Oklahoma Climatological Survey (OCS) research and service facility, in concert with the University of Oklahoma, EXPLORATIONS IN METEORLOGY places a strong emphasis on helping students understand weather and climate by using real meteorological data. The activities in this lab manual require that students tap into the OCS archives of meteorological data in order to complete meteorological exercises. Full-color pictures and data graphs, help students visually understand weather and severe weather topics. The lab manual also challenges students by providing optional questions intended for honors students, making this lab manual appropriate for both introductory and honors meteorology courses.

The past decade has been characterized by remarkable advances in meteorological observation, computing techniques, and data-visualization technology. However, the benefit of these advances can only be fully realized with the introduction of a systematic, applied approach to meteorological education that allows well-established theoretical concepts to be applied to modernized observational and numerical datasets. Designed for use with the companion textbook, Midlatitude Synoptic Meteorology, this lab manual takes just such an educational approach. Its exercises and supplemental information guide students to use contemporary observation and computing techniques to create forecasts, and reinforce lessons on synoptic-dynamic meteorology, synoptically-driven mesoscale phenomena, numerical weather prediction, ensemble prediction, and more. The textbook, lecture slides, and lab manual were developed to be used in concert, with topics considered in an order that reinforces and builds upon new knowledge in meteorological observation and forecasting, week to week.
