You Are Not A Gadget A Manifesto (Book) : Lanier, Jaron : Silicon Valley visionary Jaron Lanier was among the first to predict the revolutionary changes the World Wide Web would bring to commerce and culture. Now, in his first book, Lanier offers this cautionary look at the way the Web is transforming our lives, for better and for worse. The current design and function of the web have become ...

You Are Not A Gadget (Book) | Hennepin County Library ...

You Are Not a Gadget (2010) In his book You Are Not a Gadget (2010), Lanier criticizes what he perceives as the hive mind of Web 2.0 (wisdom of the crowd) and describes the open source and open content expropriation of intellectual production as a form of "Digital Maoism".

<p>A computer-age visionary argues that the Internet has failed to live up to its early promises, sharing cautionary perspectives on the Web 2.0 design concept while optimistically evaluating the Internet as a positive cultural vehicle.</p>
<p>A NATIONAL BESTSELLER A programmer, musician, and father of virtual reality technology, Jaron Lanier was a pioneer in digital media, and among the first to predict the revolutionary changes it would bring to our commerce and culture. Now, with the Web influencing virtually every aspect of our lives, he offers this provocative critique of how digital design is shaping society, for better and for worse. Informed by Lanier's experience and expertise as a computer scientist, You Are Not a Gadget discusses the technical and cultural problems that have unwittingly risen from programming choices—such as the nature of user identity—that were “locked-in” at the birth of digital media and considers what a future based on current design philosophies will bring. With the proliferation of social networks, cloud-based data storage systems, and Web 2.0 designs that elevate the “wisdom” of mobs and computer algorithms over the intelligence and wisdom of individuals, his message has never been more urgent.</p>
<p>A computer-age visionary argues that the Internet has failed to live up to its early promises, sharing cautionary perspectives on the Web 2.0 design concept while optimistically evaluating the Internet as a positive cultural vehicle.</p>

<p>A computer-age visionary argues that the Internet has failed to live up to its early promises, sharing cautionary perspectives on the Web 2.0 design concept while optimistically evaluating the Internet as a positive cultural vehicle.</p>
<p>Something went wrong around the start of the 21st century. Individual creativity began to go out of fashion. Music became an endless rehashing of the past. Scientists were in danger of no longer understanding their own research. Indeed, not only was individual creativity old-fashioned but individuals themselves. The crowd was wise. Machines, specifically computers, were no longer tools to be used by human minds they were better than humans. Welcome to the world of the digital revolution. Yet what if, by devaluing individuals, we are deadening creativity, endlessly rehashing past culture, risking weaker design in engineering and science, losing democracy, and reducing development in every sphere? In You Are Not A Gadget, Jaron Lanier, digital guru, and inventor of Virtual Reality, delivers a searing manifesto in support of the human and reflects on the good and bad developments in design and thought twenty years after the invention of the web. Controversial and fascinating, You Are Not a Gadget is a deeply felt defence of the individual from an author uniquely qualified to comment on the way technology interacts with our culture.</p>
<p>"You might have trouble imagining life without your social media accounts, but virtual reality pioneer Jaron Lanier insists that we're better off without them. In Ten Arguments for Deleting Your Social Media Accounts Right Now, Lanier, who participates in no social media, offers powerful and personal reasons for all of us to leave these dangerous online platforms"--</p>

The guru of virtual reality looks back at the unique experiences that formed his vision for the future of technology With a singular voice and perspective, Lanier who The New York Times calls "daringly original . . . a major wizard in the futurist circus. He is the father of virtual reality in the gaudy, reputation-burnishing way that Michael Jackson was the king of pop" considers the future of virtual technology in a book that blends memoir with ideas. He tells the wild story of his own relationship with technology by starting from the beginning. The son of Jewish immigrants and concentration camp survivors, raised in the UFO territory of New Mexico, he lost his mother at a young age and built a geodesic dome with his father in the desert. He worked as a goatherd and midwife, attended college before graduating high school, transferred to and failed out of a tony northeast liberal arts college, played music for money on the streets of New York, and eventually landed in Silicon Valley at the dawn of the first tech boom where he suddenly became rich. This crazy course to becoming a world renowned technology guru informs Lanier's optimism about virtual reality--the technology he has been immersed in from its very start. While he has been very critical of social media and other manifestations of technology, he believes that virtual reality can actually make our lives richer and fuller.Dawn of the New Everything is ultimately a look at what it means to be human in the dawn of unprecedented technological possibility.

Evaluates the negative impact of digital network technologies on the economy and particularly the middle class, citing challenges to employment and personal wealth while exploring the potential of a new information economy.

The Awesome, Impossible, Unstoppable Gadget is an inspiring picture book from Kevin Kelly and Rebecca Kelly about incredible inventions going haywire illustrates that with persistence, anyone can be awesome, impossible, and unstoppable. Trixie O’Toole is super-excited to be at Camp Create, where she can invent whatever she likes. But when a boy nicknamed “Professor” von Junk gets all the attention, Trixie feels left out. Still, she persists in following her own inspiration. When von Junk’s Invention Inventor goes out of control, everyone is horrified. Is Trixie’s own invention sufficiently awesome, impossible, and unstoppable to save the day? Trixie’s triumph will inspire future inventors and mad scientists to believe in themselves, and show that all good ideas deserve a chance. An Imprint Book “Bold animation-style illustrations bring Camp C.R.E.A.T.E. and its Gadgets Galore Competition to life ... An action-packed story.” —Kirkus Reviews

Jaron Lanier, 'the father of Virtual Reality ... a high-tech genius' (Sunday Times), tells the extraordinary story of how in just over three decades Virtual Reality went from being a dream to a reality – and how its power to turn dreams into realities will transform us and our world. Virtual Reality has long been one of the dominant clichés of science fiction. Now Virtual Reality is a reality: those big headsets that make people look ridiculous, even while radiating startled delight; the place where war veterans overcome PTSD, surgeries are trialed, aircraft and cities are designed. But VR is far more interesting than any single technology, however spectacular. It is, in fact, the most effective device ever invented for researching what a human being actually is – and how we think and feel. More than thirty years ago, legendary computer scientist, visionary and artist Jaron Lanier pioneered its invention. Here, in what is likely to be one of the most unusual books you ever read, he blends scientific investigation, philosophical thought experiment and his memoir of a life lived at the centre of digital innovation to explain what VR really is: the science of comprehensive illusion; the extension of the intimate magic of earliest childhood into adulthood; a hint of what life would be like without any limits. As Lanier shows, we are standing on the threshold of an entirely new realm of human creativity, expression, communication and experience. While we can use VR to test our relationship with reality, it will test us in return, for how we choose to use it will reveal who we truly are. Welcome to a mind-expanding, life-enhancing, world-changing adventure.

Profiles technology as an evolving international system with predictable trends, counseling readers on how to prepare themselves and future generations by anticipating and steering their choices toward developing needs.
